

Notice and Agenda of a Board Workshop

Tuesday, March 10, 2015 at 4:00 p.m.

MEETING LOCATION:	District Administration Building 12770 Second Street, Yucaipa
MEMBERS OF THE BOARD:	Director Ken Munoz, Division 1 Director Bruce Granlund, Division 2 Director Jay Bogh, Division 3 Director Lonni Granlund, Division 4 Director Tom Shalhoub, Division 5

I. Call to Order

II. Public Comments At this time, members of the public may address the Board of Directors on matters within its jurisdiction; however, no action or significant discussion may take place on any item not on the meeting agenda.

III. Staff Report

IV. Presentations

- A. Overview of the 2015 Imported Water Allocation Strategy by the San Bernardino Valley Municipal Water District [Workshop Memorandum No. 15-031 - Page 5 of 149]
- B. Overview of the Southern California Drought Response Workshop [Workshop Memorandum No. 15-032 Page 11 of 149]
- C. Overview of the Yucaipa Valley Water District's Water Shortage Contingency Plan [Workshop Memorandum No. 15-033 - Page 16 of 149]

V. Operational Issues

- A. Installation of Air Conditioning Equipment at Lift Station No. 1 [Workshop Memorandum No. 15-034 Page 35 of 149]
- B. Demolition of the Building, Basement and Foundation at 35192 Cedar Avenue Yucaipa (Assessor Parcel Number 0303-232-17) [Workshop Memorandum No. 15-035 - Page 41 of 149]

VI. Development Related Issues

A. Discussion Regarding the Installation of a Water Meter for the Construction of a Second Residential Dwelling at 10556 Bryant Street - Yucaipa [Workshop Memorandum No. 15-036 - Page 55 of 149]

Any person with a disability who requires accommodation in order to participate in this meeting should telephone Erin Anton at (909) 797-5117, at least 48 hours prior to the meeting in order to make a request for a disability-related modification or accommodation.

Materials related to an item on this agenda submitted to the Board of Directors after distribution of the workshop packet are available for public inspection during normal business hours at the District office located at 12770 Second Street, Yucaipa. Meeting material is also be available on the District's website at <u>www.yvwd.dst.ca.us</u>

VII. Capital Improvement Projects

- A. 2015 Pipeline Replacement Program Construction of an 8-Inch Potable Water Pipeline in 8th Street and Washington Drive, Yucaipa [Workshop Memorandum No. 15-037 - Page 68 of 149]
- B. Status Report on the Construction of a 6.0 Million Gallon Drinking Water Reservoir R-12.4
 Calimesa [Workshop Memorandum No. 15-038 Page 70 of 149]
- C. Compensatory Mitigation Requirements from the California Department of Fish and Wildlife for the Second Street Pipeline Project across Wilson Creek Yucaipa [Workshop Memorandum No. 15-039 Page 75 of 149]
- D. Authorization to Pre-Purchase 30-Inch Cement Mortar Lined Welded Steel Pipe for the Second Street Pipeline Project [Workshop Memorandum No. 15-040 Page 82 of 149]

VIII. Administrative Items

- A. Unaudited Financial Report for the Period Ending on February 28, 2015 [Workshop Memorandum No. 15-041 Page 87 of 149]
- B. Overview of Medical Insurance Premiums for 2015-16 [Workshop Memorandum No. 15-042 - Page 117 of 149]
- C. Authorization to Purchase Replacement Service Trucks for the Public Works Department [Workshop Memorandum No. 15-043 - Page 119 of 149]

IX. Director Comments

X. Adjournment

Staff Report

Presentations

Date: March 10, 2015

Subject: Overview of the 2015 Imported Water Allocation Strategy by the San Bernardino Valley Municipal Water District

The San Bernardino Valley Municipal Water District has been actively working with local water retailers to coordinate how imported water will be distributed to satisfy the competing demands for water resources throughout their service area during the ongoing drought.

On Monday, March 2, 2015, the California Department of Water Resources increased the allocation of imported water available from the State Water Project from 635,759 acre feet to 839,566 acre feet. The new allocation of available water represents about 20% of the State Water Project contractors' requested water quantities for 2015.

On Wednesday, March 4, 2015, the staff from the San Bernardino Valley Municipal Water District presented and explained how various allocations of imported water from the Department of Water Resources will be distributed to water retailers throughout their service area. Based on the direct coordination and communication between staff members at each agency, the local water retailers and the San Bernardino Valley Municipal Water District were able to formulate a comprehensive plan to distribute imported water during the current drought cycle. As shown below, the following spreadsheet illustrates the amount of imported water that will be delivered to each water retailer based on the Table A allocation as determined by the Department of Water Resources.

The strategy of continuous communication and coordination by the San Bernardino Valley Municipal Water District and the local water retailers are providing a unique example of how multiple agencies can proactively manage limited water resources during severe drought conditions. The District staff recognizes and appreciates the mutually beneficial working relationship we have with water retailers in the area and our State Water Contractors.

NOTICE TO STATE WATER PROJECT CONTRACTORS

Date: MAR 0 2 2015

Number: 15 - 03

From:

Subject: 2015 State Water Project Allocation Increase - 20 Percent

Carl A. Torgersen

Department of Water Resources

The Department of Water Resources (DWR) is increasing the allocation of 2015 State Water Project (SWP) water for the long-term contractors from 635,759 acre-feet to 839,566 acre-feet. Due primarily to runoff from storms in December and February which was exported and stored in the San Luis Reservoir, SWP supplies are projected to increase from 15 percent to 20 percent of most SWP contractors' requests for Table A water, which totals 4,172,686 acre-feet. Attached is the updated 2015 SWP allocation table.

This allocation is made consistent with the long-term water supply contracts and public policy. DWR considered several factors, including existing conditions, SWP operational constraints such as the conditions of the recent Biological Opinions for Delta Smelt, Salmonids and Longfin Smelt incidental take permit, and 2015 contractor demands. DWR may revise allocations if warranted by the year's developing hydrologic and water supply conditions.

Based on this updated allocation, DWR will use the 30 percent delivery schedules submitted by the contractors earlier this year to arrive at the 20 percent schedules, unless revised schedules are submitted by the contractors. DWR will send an approved monthly water delivery schedule for 2015 to each long-term contractor in March 2015.

If you have any questions or need additional information, please contact Robert Cooke, Chief of DWR's State Water Project Analysis Office, at (916) 653-4313.

2015 STATE WATER PROJECT ALLOCATION (ACRE-FEET)

Workshop Memorandum 15-032

Date: March 10, 2015

Subject: Overview of the Southern California Drought Response Workshop

On February 25-26, 2015, the Southern California Water Committee and the National Water Research Institute conducted a Drought Response Workshop. This event focused on drought planning, response, and mitigation measures. Attendees consisted of individuals from water agencies and other public and local organizations involved in drought response and planning efforts.

The purpose of this agenda item is to provide a brief overview of the workshop proceedings.

California Department of Water Resources Southern California Water Committee National Water Research Institute

Drought Response Workshop

February 25-26, 2015

AGENDA

Location: Atrium Hotel 18700 MacArthur Boulevard Irvine, CA 92612 Contacts: Brandi Caskey, NWRI (714) 378-3278 (office) Jeff Mosher, NWRI (714) 705-3722 (cell)

DAY 1 - Wednesday, February 25, 2015

10:00 am	Welcome and Introductions	Jeanine Jones, DWR Rich Atwater, SCWC Jeff Mosher, NWRI
10:10 am	Statewide Water Conditions and Preparing for a Dry 2015	Jeanine Jones, DWR
10:40 am	Southern California Water Use Trends and Drought Allocation Plan	Demetri Polyzos, MWD
11:20 am	SWRCB Emergency Drought Regulations and Requirements for Urban Water Agency Reporting	Eric Oppenheimer, SWRCB
12:00 pm	Lunch (provided)	
1:00 pm	2015 UWMPs: Discussion of New Requirements	Peter Brostrom, DWR
1:40 pm	Implementation of Proposition 1, and IRWM	Tracie Billington, DWR
2:20 pm	On-site Non-potable Water as an Alternative Water Supply: Opportunities and Challenges	Paula Kehoe, San Francisco Public Utilities Commission
2:50 pm	Break	
3:10 pm	Innovative Software & Information Solutions to Promote Behavioral Change	Nate Adams, Santa Margarita Water District Philin Levinson, WaterSmart
3:25 pm	How to Fortify Revenue Resilience	Christine Boyle, Valor Water Analytics

3:45 pm	 Panel Discussion: Retail Utility Drought Response What Works and Plans for 2015 Matt Collings and Drew Atwater, Moulton Niguel Water District Fiona Sanchez, Irvine Ranch Water District Matt Lyons, Long Beach Water Department Kelly Salt, BBK Professor Ken Baerenklau, UC, Riverside 	Rich Atwater, Moderator
5:00 pm	Day One of Workshop Adjourns	
5:00 pm 6:30 pm	Reception	

DAY 2 - Thursday, February 26, 2015

8:30 am	Welcome and Introductions	Jeanine Jones, DWR Rich Atwater, SCWC Jeff Mosher, NWRI
8:35 am	Implementation of California Statewide Groundwater Elevation Monitoring (CASGEM), and Sustainable Groundwater Management Act	Mary Scruggs, DWR
9:05 am	Progress in sub-seasonal to seasonal climate forecasting	Duane Waliser, JPL
9:45 am	Break	
10:00 am	Integration of precision NASA snow products with the operations of the Colorado Basin River Forecast Center to improve decision making under drought conditions	Tom Painter, JPL
10:30 am	The Role of Weather Modification in the Colorado River Basin States Process	Tom Ryan, MWD
11:00 am	Status of State Indirect and Direct Potable Reuse Efforts	Jeff Mosher, NWRI
11:30 am	Southern California Salinity Management Study in a Time of Drought	Warren Teitz, MWD
12:00 pm	Workshop Adjourns	

There is no cost to participate, but registration is required.

To register, e-mail Brandi Caskey at bcaskey@nwri-usa.org and indicate which events you will attend.

- (a) Day 1 Workshop, Wednesday 2/25, 10:00 pm 5:00 pm (Lunch Provided)
- (b) Day 1 Reception, Wednesday 2/25, 5:00 pm 6:30 pm
- (c) Day 2 Workshop, Thursday 2/26, 8:30 am 12:00 noon
- (d) All

94 percent of Californians agree: The drought is serious. Now what do we do about it?

Feb. 26, 2015 Updated Feb. 27, 2015 6:52 a.m. By AARON ORLOWSKI / STAFF WRITER

Here's something almost every Californian can agree on:

We're in a drought.

A Field Poll released Thursday found 94 percent of registered voters in California consider the state's more than three-year water shortage to be at least "serious," with a full 68 percent considering the situation "extremely serious."

The poll came out as water managers met in Irvine to discuss where the state might turn next for more water and to seek more precise forecasts for rainstorms.

By contrast, when the state last had a similarly severe drought, in 1977, polling found that just 51 percent of state voters saw the problem as extremely serious.

The new poll hints at something else: Californians like the state's current policy of voluntary conservation but aren't interested in being told by the state how much to cut back. Just 34 percent want the state to impose mandatory rationing, up 7 percent from a year earlier, while 61 percent favor the state's current policy of asking residents to voluntarily cut back on water use.

So far, voluntary reductions have produced limited results.

A year ago, Gov. Jerry Brown declared the state to be in a drought emergency and asked residents to reduce consumption by 20 percent. But that threshold wasn't reached statewide until December.

If Californians can't conserve enough, water managers will either have to create new sources, often in the form of recycling, or pray that Mother Nature delivers sooner rather than later.

Water experts discussed creating those new water sources and refining rain forecasting techniques this week at the 2015 Drought Response Workshop hosted by the Southern California Water Committee in Irvine. About 150 drought researchers, government officials and water agency representatives came to the two-day conference.

A key message at the meeting was conservation.

Californians like the state's current policy of voluntary water conservation but aren't interested in being told by the state how much to cut back. Just 34 percent want the state to impose mandatory rationing, up 7 percent from a year earlier, while 61 percent favor the state's current policy of asking residents to voluntarily cut back on water use.

SHUTTERSTOCK.COM

"Water agencies are going to great lengths to maximize water supplies, but ultimately no one is insulated from the impacts of this drought," Richard Atwater, the committee's executive director, said.

"As we brace for a fourth painfully dry year, it's crucial that Californians throughout the state make every effort to conserve water."

At the same time, experts such as Duane Waliser, a chief scientist at the Jet Propulsion Laboratory in Pasadena, are refining rain forecasting methods to help water managers know when supplies will fall from the heavens.

Nearly half of California's droughts are busted by atmospheric rivers, or bands of concentrated moisture in the sky. Waliser said Thursday that if weather and climate forecasters know when atmospheric rivers are coming, they can relay that information to water managers who can more effectively budget water supplies.

For example, in December 2010 two weather patterns converged to cause 14 days of atmospheric river-style rain in Northern California, far longer than the average duration of two days. If those same two weather patterns converge in 2015, California might finally climb out of its drought.

"If we can learn to decrypt them, we can get larger lead time forecasts," Waliser said.

In the meantime, water managers continue to work on expanding water supplies. One of the most promising is water reuse: recycling wastewater into drinking water. Orange County Water District is currently expanding its world-leading recycling plant, which treats wastewater and pumps it back into groundwater basin in a process called indirect potable reuse.

Andy Salveson, the water reuse chief technologist at Carollo Engineers said at the conference Thursday that pumping the treated water underground – the "indirect" part – is unnecessary. It's cheaper and easier to pipe the water directly to consumers after treatment, perhaps storing it short-term in a tank.

Salveson figured water managers could save \$100 per acre foot of water by eliminating environmental buffers such as underground aquifers and reservoirs.

"You can have large increases in water supply," he said.

California voters agree that the state's water supply must be increased. Last year they approved a massive spending plan that invests \$7.5 billion in projects to increase water storage, water recycling, treatment and cleaning up contaminated groundwater.

The Field Poll found just 10 percent surveyed say the state's water storage and supply is adequate. More than half believe government restrictions should be relaxed to build new water storage on state parkland and forest reserves, while 38 percent disagree.

Half of Californians also said that in dry years, the state should help farmers by easing environmental regulations that protect fish in the Sacramento-San Joaquin Delta, but the survey found 46 percent disagreeing.

Residents in different parts of California see the drought's seriousness in differing degrees. Nearly three-quarters of registered voters in San Francisco and the Central Valley's farming region told pollsters that they perceive the shortage as extremely serious, while just under two-thirds in Los Angeles County held the same belief.

The poll was conducted by telephone from Jan. 26 to Feb. 16, surveying 1,241 registered voters in California. It has a margin of error of between plus or minus 3.2 and 4.1 percentage points.

ucaipa Valley Water District Workshop Memorandum 15-033

Date: March 10, 2015

Subject: Overview of the Yucaipa Valley Water District's Water Shortage Contingency Plan

On July 15, 2014 the State Water Resources Control Board approved an emergency regulation to ensure water suppliers, their customers and state residents increase water conservation in urban settings. The emergency regulations are summarized below and a detailed overview is attached that discusses how the emergency regulations apply to large water purveyors (>3,000 connections) versus small water purveyors (<3,000 connections). There are 440 urban water suppliers with more than 3,000 connections and there are 2,674 water systems with fewer than 3,000 customers are not required to prepare Urban Water Management Plans and are exempt from certain reporting requirements, it is difficult to determine the population served and the water resources utilized by these smaller water systems.

EMERGENCY CONSERVATION REGULATIONS

SAVE WATER by Turning off Outdoor Irrigation Systems During Rainy Periods and Reducing Watering Times During the Cooler Weather

What's Prohibited for Everyone

- Potable water to wash sidewalks & driveways
- Runoff when irrigating with potable water
- ->> Hoses with no shutoff nozzles to wash cars
- Potable water in decorative water features that do not recirculate the water

What Water Suppliers Must Do

- ->> Impose restrictions on outdoor irrigation
- ->> Report on water use monthly

With the ongoing drought conditions, the State Water Resources Control Board will likely take additional steps to enforce water conservation practices throughout the State which may increase the reporting and staff labor requirements to achieve compliance. Based on the emergency regulations implemented by the State Water Resources Control Board, the District may also need to revise our Water Shortage Contingency Plan (attached) to achieve compliance.

The purpose of this agenda item is to provide a brief overview of the District's Water Shortage Contingency Plan in advance of the anticipated future regulations imposed by the State Water Resources Control Board.

¹ Source: <u>http://www.swrcb.ca.gov/board_info/agendas/2014/jul/071514_10_staffpres.pdf</u>

Mandatory Water Conservation Regulation Go Into Effect

An <u>emergency regulation</u> to increase conservation practices for all Californians became effective July 29, 2014. The new conservation regulation targets outdoor urban water use. In some areas of the State, 50 percent or more of daily water use is for lawns and outdoor landscaping. This regulation establishes the minimum level of activity that residents, businesses and water suppliers must meet as the drought deepens and will be in effect for 270 days unless extended or repealed.

Prohibitions for ALL urban water users in California:

- The application of potable water to any driveway or sidewalk.
- Using potable water to water outdoor landscapes in a manner that causes runoff to adjacent property, non-irrigated areas, private and public walkways, roadways, parking lots or structures.
- Using a hose that dispenses potable water to wash a motor vehicle, unless the hose is fitted with a shut-off nozzle.
- Using potable water in a fountain or decorative water feature, unless the water is recirculated. Recycled water is not mandated, but encouraged for fountain use.

Requirements for Urban Water Suppliers (serving >3000 connections):

- Implement water shortage contingency plans to a level where restrictions on outdoor irrigation are mandatory.
- Urban water suppliers without a plan, or without an adequate plan, must either mandate that
 outdoor irrigation be reduced to no more than twice a week or implement other mandatory
 use restrictions that provide a comparable level of savings.
- Report monthly water production beginning August 15. Include an estimate of the gallons per capita per day used by residential customers beginning with the October 15 report.

Requirements for Other Water Suppliers (serving <3000 connections):

 Mandate that outdoor irrigation be reduced to no more than twice a week or implement other mandatory use restrictions that provide a comparable level of savings.

CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY STATE WATER RESOURCES CONTROL BOARD 1001 I Street, Sacramento, CA 95814 • 916-341-5254 • Mailing Address: P.O. Box 100, Sacramento, CA 95812-0100 • www.waterboards.ca.gov

Assessing Compliance

- Individual Prohibitions evaluating alleged violations and taking enforcement action is primarily a local discretionary action.
- Water Suppliers compliance will be evaluated based on multiple factors including implementation of the required actions, the content of the monthly reports (Urban Water Suppliers), and other relevant information.

Tips for Implementing the New Regulations

- Notify and educate staff, ratepayers and the community at large about the prohibitions.
- Inform ratepayers of the requirements of the stage of the Water Shortage Contingency Plan required by the regulations.
- Access the water conservation resources clearinghouse, a partnership of the State of California and the Association of California Water Agencies at either http://saveourwater.com/

Contact Information

- Report State Agency water waste at <u>http://www.saveourh2o.org/report-water-waste</u>
- Contact the State Water Board's drought hotline for questions on drought-related activities including general questions on the emergency regulations: (916) 341-5342.

More information on the emergency regulation can be found at the Conservation Regulation Portal.

Water Shortage Contingency Plan

Supplement to the Yucaipa Valley Water District 2010 Urban Water Management Plan and the 2010 Regional Urban Water Management Plan

Adopted on June 15, 2011

Section 1 - Introduction

Water conservation is more than just restricting water use. Water conservation is the efficient use of water through conservation measures and increased efficiency. Implementing water conservation allows water utilities to avoid the cost of building additional drinking water facilities and reasonably expands the use of water resources. Water conservation is one of the last options available for communities to continue the long tradition in America of cheap, available water.

Inexpensive and readily available water supplies are often taken for granted while in many parts of the world this luxury is unique.

Actions to be undertaken by the urban water supplier to prepare for, and implement during, a catastrophic interruption of water supplies including, but not limited to, a regional power outage, an earthquake, or other disaster (California Water Code Section 10632(c))

The objective of Water Shortage Contingency Planning is to establish actions and procedures for managing water supply and demands during water shortages. The plan would help the District maintain essential public health and safety and minimize adverse impacts on economic activity, environmental resources and the region's lifestyle.

This plan complements the District's Emergency Response Plan. That plan is an emergency plan that defines decision-making authority in emergencies and creates specific emergency action plans for a number of systems, security, and management procedures.

As part of the Emergency Response Plan, the District would provide a unified incident command center as a disaster response command team at the Administration Building. These team leaders will determine policies and strategies for handling major disasters. Individual departments, working on a common incident, will coordinate their field efforts through the incident command structure.

While water supply disruptions can occur for a variety of reasons, a weather related water shortage, or drought, is one category of particular importance to the Yucaipa Valley Water District for reasons described below. Droughts are naturally occurring but unpredictable weather events of varying frequency, duration and severity. In the Yucaipa Valley, historical data indicates a high probability of short term and/or multi-year drought conditions.

This region is generally faced with a relatively dry summer period with very little rainfall occurring during the summer months. Most of the annual 16 inches of precipitation occurs during the fall and winter months from November to April, with most of the rainfall occurring in February. Since the Yucaipa Valley Water District is typically reliant on local surface water and groundwater, the amount of precipitation received in the Yucaipa Valley is extremely important to recharge our underground water basins. Certain weather events that can affect this cycle may manifest in one or more of the following ways:

- Less than normal winter precipitation and snowpack, this would limit the quantity of water available at the Oak Glen Surface Water Filtration Facility and ultimately reduce the amount of groundwater recharge.
- Unusually warm spring weather bringing with it early melting of the snowpack, resulting in early drawdown of the mountain resources.

Yucaipa Valley Water District Adopted on June 15, 2011

- Unusually hot and dry summer weather, which can significantly increase peak season demands.
- A delayed return of the fall rains, or a dry winter, which can delay the fall percolation refill cycle (which replenishes the underground storage reservoirs after the peak season).

Yucaipa Valley Water District's strategy for dealing with the hydrologic uncertainty associated with drought management and related emergency issues involve several components:

- Information To deal with hydrologic uncertainty in real-time and in longer term planning horizons, the District's management team uses a number of available informational and data gathering sources. One of the most valuable resources used by the District is the California Department of Water Resources Data Exchange Center. This center provides real time data at the California Department of Forestry Fire Station located on Highway 38 as well as other important statewide tools.
- Forecasting Through the National Oceanic and Atmospheric Administration (NOAA), the District regularly monitors daily weather forecasts, mid-range weather forecasts, 30and 90-day and multi-season climate outlooks. The Internet has greatly improved access to these sources of information. For example, NOAA's El Niño theme page on the Internet provides a wealth of timely information on current and forecasted El Niño and La Niña conditions with enough lead time for the District to prepare for such events.
- Communication The District's management team works closely with members of other local, state, and federal agencies including the City of Yucaipa, City of Calimesa, County of San Bernardino, and the County of Riverside. The local municipalities meet once a month to discuss several issues related to the Yucaipa Valley, including hydrologic conditions, facility and system operations, and other subjects as may be beneficial in managing our water supplies.
- Dynamic operating rules Operational flexibility is key, with operating plans changing as conditions and forecasts change. Dynamic groundwater pumping and reservoir storage settings are continuously monitored and modified to best fit the daily temperature forecasts. All of the tools, information sources and communications outlined above, are needed for coordinating and decision making related to real-time operations.

Section 2 - Principles of a Water Shortage Contingency Plan

The Yucaipa Valley Water District's Water Shortage Contingency Plan, is based on the following principles:

- Given clear, timely and specific information on supply conditions and the necessary
 actions to forestall worsening conditions, customers prefer the opportunity to meet
 targeted demand reduction levels through voluntary compliance measures. The decision
 to move to mandatory restrictions is more acceptable if the voluntary approach has been
 tried first but has not resulted in enough demand reduction to ensure public health and
 safety through the projected duration of the shortage.
- Each drought or other shortage situation has enough unique characteristics that a plan cannot specifically define all the scenarios and specific supply and demand management

actions. The usefulness of a Water Shortage Contingency Plan lies in planning the range of supply and demand management actions in advance of the situation, and in defining the communication mechanisms by which decisions will be made during the event.

- Given the effective long-term conservation program operated by the District, it is important
 to distinguish between the short term curtailment measures necessitated by a water
 supply disruption, and the conservation measures the District promotes to its customers.
 Water conservation generally focuses on improved efficiencies, whereas curtailment
 measures can involve short-term actions that may impact quality of life.
- It is essential to closely monitor water quality during a supply disruption and particularly during a warm weather drought. Water quality issues must be considered when supply management decisions are made.

Section 3 - Alternative Water Supplies

Depending on the nature and timing of a potential water shortage, alternative water supplies may be useful to supplement existing supplies.

- Interties Since water supply disruptions may not affect all water suppliers to the same extent, it is sometimes feasible for the District to obtain water from other providers through interties, where they exist.
- Recycled Water Yucaipa Valley Water District recognizes the value of recycled water as a means to conserve and extend the useful life of the potable water supply. Recycled water is the use of highly treated water for irrigation, and construction purposes, etc. in order to reduce demand for potable water and lessen the impact of shortages on the community. It is important to note, that as recycled water becomes more widely available through the District's recycled water facilities, the District will rely more heavily on it as a fundamental long-term source of supply (even in non-drought periods).

Section 4 - Phased Curtailment Plan

The Water Shortage Contingency Plan provides four stages of response based of increasing severity, as progressively more serious conditions warrant. This type of response would be appropriate to apply to a summer drought or other water service disruption. The four stages include a variety of communications, internal operations, and supply and demand management strategies as appropriate, and are characterized as follows:

- Advisory Stage -The public is informed as early as meaningful data are available that a possible shortage may occur.
- Voluntary Stage If supply conditions worsen, the plan moves to the Voluntary Stage, which relies on voluntary cooperation and support of customers to meet target consumption goals. During this stage, specific voluntary actions are suggested for both residential and commercial customers.

- Mandatory Stage If the Voluntary Stage does not result in the reduction needed, the Mandatory Stage prohibits or limits certain actions. This stage would be accompanied by an enforcement plan, which could include fines for repeated violation.
- Emergency Curtailment This addresses the most severe need for demand reduction and could include a combination of mandatory measures and rate surcharges. This could be used as the last stage of a progressive situation, such as a drought of increasing severity, or to address an immediate crisis, such as a facility failure.

Recommendations about implementing the Water Shortage Contingency Plan would be made to the General Manager, based upon recommendations by District staff. The General Manager would then inform the members of the Board of actions taken or approval to implement specific strategies depending upon the severity of the situation. Prior to making a recommendation, the District staff would consider the following factors in making its recommendations:

- Total supply availability, including groundwater, interties, and other available water supplies;
- The rate of decline in total reservoir storage compared with the normal operating rule curve;
- Short and long term weather forecasts by the NOAA National Weather Service;
- Computer modeling of weather and demand assumption data;
- The trends and forecasts of the system's daily water demands;
- The estimated margin of safety provided by the demand reduction, compared with the level of risk assumed if no action is taken;
- The value of lost water sales revenue compared with the increased margin of reliability;
- The length of time between stage changes (abrupt starts and stops are to be avoided), and required time lags to shift administrative gears and institute program (printing, purchasing, etc.);
- Current events; and
- Customer response.

ADVISORY STAGE

<u>Objectives</u>

- To prepare the cities, school district, developers and water users for potential water shortage thereby allowing all parties adequate planning and coordination time.
- To undertake supply management actions that forestalls or minimizes the need later for more stringent demand or supply management actions.

Triggers

- As presented earlier, there are a variety of weather and other conditions that may cause concern about water availability and a potential water shortage. The most fundamental weather condition that would trigger an "Advisory" would be when the winter season rainfall total is significantly less than the average annual rainfall of 18 inches per year for Yucaipa (as measured at the Mill Creek CDF Fire Station).
- The Advisory would be withdrawn when projected water supplies such as State Water Project water and/or recycled water are in sufficient supply to provide normal water supply conditions to the District's customers.

Public Message

• "The potential exists for lower than normal supply; conditions may return to normal or, later on, we may need to reduce consumption. We'll keep you informed."

Advisory Stage Goal

• Voluntary conservation measures resulting in a 5% - 10% reduction in water use, which can generally be achieved by reducing residential landscaping, and irrigation use.

<u>Advisory Stage Action Plan - Suggested Actions</u> - The suggested actions will be modified accordingly based on regional and statewide activities, actions and press coverage.

- Brief elected officials.
- District staff to issue a water conservation press release/newsletter during the summer months as a reminder to customers. See the sample press release as provided in Attachment "A".
- District adds text to monthly billing to remind customers of water conservation practices. An example would be:
- "During the summer months, please remember not to water between the hours of 10:00am and 8:00 pm. Thank you for conserving".
- District staff to regulate construction meter activity. This may include restricting quantity of water used and the issuance of new construction meters.
- District staff to monitor and record potable water irrigation practices at golf courses, parks and schools to effectively regulate the use of limited potable supplies.
- District staff to encourage the use of recycled water as a means to remain drought tolerant and promote continuous water conservation measures.
- Weekly planning meetings to include updates on water supply issues and alternatives to prepare for the next stage of the shortage contingency plan.
- Intensify ongoing media education effort about the water system, particularly relationship of weather patterns to supply and demand; provide up to date data and implications for water use, if known.

<u>Yucaipa Valley Water District Internal Operations for Advisory Stage</u> - The suggested actions may be modified accordingly based on the specific situation.

- Prepare to establish purveyor "hotline", a frequently updated recording providing latest information and supply and demand data.
- Consult with other major customer groups, e.g., parks departments, landscape industry, forming a committee if needed, to assist the shortage advisory group to define message and provide feedback on utility actions.
- Initiate status report to entities with special interests, e.g., large water users especially landscape and nursery industry, parks, major water using industries.
- Prepare public information materials explaining the Water Contingency Shortage Plan stages and range of actions; prepare "Questions and Answers" for all customer groups, including those who may be planning new landscaping projects.
- Intensify coordination with other regional water suppliers to learn what conditions they are projecting for their systems.
- Evaluate ability, resources, and plans to move into Voluntary stage; as appropriate, begin preparatory measures.
- Intensify data collection actions (storage reservoirs, wells and power supply) and monitoring weather forecasts.
- Intensify the District's computer modeling runs of projected supply, storage and demand scenarios.
- Intensify supply side management techniques to optimize existing sources.

Yucaipa Valley Water District Adopted on June 15, 2011

- Assess current water main flushing and reservoir cleaning activities to determine whether they should be accelerated to be completed prior to the peak season or reduced to conserve supply.
- Assess water quality in reservoirs and distribution system to target for correction areas that may be predicted to experience problems.
- Initiate planning and preparation for Voluntary Stage actions, including an assessment of
 potential staffing impacts, training needs, and communications strategies including use of
 web-based information

VOLUNTARY STAGE

<u>Objectives</u>

- To maintain or reduce demand to meet target consumption levels by customer voluntary actions.
- To forestall or minimize need later for more stringent demand or supply management actions
- To minimize the disruption to customers' lives and businesses while meeting target consumption goals
- To maintain the highest water quality standards throughout the shortage.

<u>Triggers</u>

- The "Voluntary Stage" is implemented when one or both of the following factors applies:
 - Supply conditions identified in the Advisory Stage have not improved.
 - Demand levels indicate the need for a more systematic response to manage the situation
- Heavy groundwater pumping coupled with higher summer temperatures means that there
 might be an increased likelihood that water quality problems may become an issue.
 Consideration will be given to potential water quality issues in defining the supply and
 demand management strategies.

Public Message

"We are relying on support and cooperation of all water users to stretch the available water supply. Demand needs to be reduced by 10-15%. Customers are responsible for determining how they will meet that goal. Water waste is not allowed. If everyone cooperates, we may avoid imposing more stringent restrictions."

Voluntary Stage Goal

At this stage, the goal would be to achieve a 10% - 15% reduction in water use. Customers can generally achieve this goal through constant water conservation practices.

<u>Voluntary Stage Action Plan - Suggested Actions</u> - The suggested actions will be modified accordingly based on regional and statewide activities, actions and press coverage.

The District staff shall meet frequently to re-evaluate the situation based on current and projected supply conditions and the season, and determine the appropriate actions and strategies. The staff will determine target consumption goals to be achieved on a voluntary basis, which may be revised as necessary. (See attachment B) Based on the consumption goal, some or all of the following actions will be taken; those actions that are asterisked (*) will be considered initially for

Yucaipa Valley Water District Adopted on June 15, 2011

implementation if demand reductions more than 10 to 15 percent below normal are necessitated, or later if voluntary measures implemented fail to deliver targeted savings.

- Establish systematic communications with elected officials at the committee and Board level to communicate the nature and scope of voluntary measures and strategy
- District staff to evaluate whether targeted consumption levels and supply conditions warrant a rate surcharge to reinforce voluntary actions and/or to recover revenue losses*; the General Manager makes recommendation to Board members
- Prepare appropriate legislation regarding emergency surcharges, if required
- Consult with customer groups throughout the shortage to help develop public information messages and materials and to obtain feedback on utility actions
- Initiate major public information, media and advertising campaign:
 - In daily newspapers, publish and promote consumption graph that displays the goal and previous 24 hour consumption;
 - Promote consumption goals for typical households, and a percentage reduction goal for commercial customers (Attachment C contains a list of recommended actions for customers to take to reduce consumption)
 - Develop and implement a marketing plan, including paid advertising, to keep customers informed about supply and demand conditions; reinforces desired customer actions; recommends customer actions to reduce demand sufficiently; and, depending on conditions, reminds customers that if goals are not achieved, restrictions may be necessary
- Identify what potential next steps will be to reduce demand including timing, what type of
 restrictions and/or surcharges will be imposed.
- Establish routine timing for press releases (e.g., every Monday morning) that provide current status and outlook; present information in standardized format that becomes familiar to media and public.
- Include water quality information in public information so that if flushing is necessary, the public understands that it is essential for water quality maintenance.
- Publicize the water supply conditions web page, which is updated regularly. Ensure the information provided covers the needs of all key interests: the public, news media and purveyors.
- Meet with landscape industry representatives to inform them of current and projected conditions; develop partnership programs and informational materials on the shortage, consumption goals, etc. for distribution by industry and utilities.
- Establish and promote "hotlines" for customers to obtain additional conservation information.
- Contact largest customers to request percentage reduction. Contact City and other public agencies to inform them of conditions and request their cooperation.
- Prepare list of commercial car wash facilities that recycle water
- Establish regular communication mechanism to keep Department employees, especially utility account representatives and water service consultants, up to date on goals, conditions, and actions
- Print generic postcards to acknowledge receipt of customer correspondence regarding the shortage and to inform customer that specific response is being prepared
- Initiate remaining planning and preparation for Mandatory Stage

<u>Yucaipa Valley Water District Internal Operations for Voluntary Stage</u> - The suggested actions may be modified accordingly based on the specific situation.

- Continue actions listed in the Advisory Stage.
- Eliminate all operating system water uses determined not to be essential to maintain water quality such as pipeline flushing, reservoir overflows; complete cleaning of any reservoirs known to be vulnerable to warm weather taste and odor concerns.
- Increase water quality monitoring actions.
- Implement staffing reassignments as needed, and plan staffing changes, which may be needed for the Mandatory Stage, including staff to enforce mandatory restrictions.

Supply and Demand Management Actions

- Issue a request that non-recirculating fountains be turned off*
- Restrict construction meters to only essential purposes*
- Activate any existing interties to increase supply availability*
- Request that Fire Department limit training exercises that use water
- Request that City agencies eliminate washing fleet vehicles unless recycling car washes are used
- Request that hosing sidewalks, driveways, parking lots, etc. be limited to situations that require it for public health and safety
- Have YVWD field personnel "tag" observed obvious water waste such as hoses without shutoff nozzles, gutter flooding, etc. with notice that informs customer about the supply conditions and need to conserve
- Evaluate ability to accelerate or enhance or expand long term conservation programs; implement as appropriate

MANDATORY STAGE

Objectives

- To achieve targeted consumption reduction goals by restricting defined water uses.
- To ensure that adequate water supply will be available during the duration of the situation to protect public health and safety
- To minimize the disruption to customers' lives and businesses while meeting target consumption goals.
- To maintain the highest water quality standards throughout the shortage.
- To promote equity amongst customers by establishing clear restrictions that affect all customers

Triggers

The General Manager, with approval from the Board of Directors, would approve progression to this stage if goals established in the Advisory and Voluntary Stage have not been met, and additional action is needed. The specific restrictions imposed during the mandatory stage would be determined based on the season of the year, targeted demand levels, and other considerations previously mentioned. Variations of the specific restrictions may be applied based on water supply conditions. For example, lawn watering restrictions may simply consist of time of day restrictions; or, if conditions warrant, lawn watering could be restricted to certain times of day and allowed only once a week.

Public Message

"It is necessary to impose mandatory restrictions to reduce demand based on the current water shortage. We are continuing to rely on the support and cooperation of the public to comply with these restrictions but need the certainty and predictability of restricting certain water uses in order to ensure that throughout the duration of this shortage an adequate supply of water is maintained for public health and safety."

Mandatory Stage Goal

Mandatory conservation measures resulting in a 10% - 15% reduction in water use.

<u>Mandatory Stage Action Plan - Suggested Actions</u> - The suggested actions will be modified accordingly based on regional and statewide activities, actions and press coverage.

- The District staff will make recommendations regarding the nature, scope and timing of restrictions to the members of the Water Conservation Committee. The District staff will need to determine that the water supply and demand management strategies will not result in unacceptable water quality degradation.
- The General Manager recommends to the Board of Directors to implement the Mandatory Stage conservation measures and other appropriate actions.
- The Board adopts a resolution on mandatory restrictions and, if needed and not already in place, emergency surcharges.
- The public is informed about the nature and scope of the mandatory restrictions through a press conference, paid advertising and other means, including direct mail.
- The enforcement mechanisms, rate surcharges, target consumption goals, projections for how long restrictions will be in place and the reasons for imposing restrictions will also be identified, as will the possible consequences if goals are not met.
- Any exemptions from restrictions will be clearly identified.
- In communicating mandatory restrictions to the public, a clear distinction will be made between lawn/turf watering and watering gardens and ornamental plantings. The type and amount of watering allowed will be clearly defined.
- A "Customer Hotline" will be set up to report violations of restrictions.
- Customers who irrigate with private wells will be urged to install signs to let the public know that private well water is being used.
- Communication actions from the Advisory and Voluntary stages will be continued and enhanced.
- Plans will be made to move into the fourth stage Emergency Curtailment and to begin preparatory measures as appropriate

<u>Yucaipa Valley Water District Internal Operations for Mandatory Stage</u> - The suggested actions may be modified accordingly based on the specific situation.

- Continue appropriate actions from previous stages
- Finalize and implement procedures for exemptions from restrictions and/or emergency surcharges.
- Finalize and implement enforcement procedures for restrictions including highly visible "Water Watchers".
- Increase water quality monitoring actions at storage reservoirs.

Supply and Demand Management Actions

Overall supply conditions will be considered at regular meetings by District staff and the members of the water conservation committee in evaluating which restrictions to impose.

POSSIBLE WATER SHORTAGE RESTRICTIONS

Watering Restrictions

The following are several <u>possible approaches</u> to watering restrictions. <u>The nature of the</u> restrictions used will depend on the situation, and may change as severity of the situation changes.

- Prohibit all watering during the day, for example between 6:00 a.m. and 9:00 p.m.
- Limit all watering to a specific number of days per week or per month. This choice will depend on target consumption goals, the time of year and the extent to which watering is occurring, and how much demands have already decreased.

Other Restrictions

- Prohibit use of any ornamental fountain using drinking water for operation or make-up.
- Prohibit car washing except at commercial car wash facilities that recycle water.
- Rescind water construction meter hydrant permits.
- Prohibit washing of sidewalks, streets, decks or driveways, except as necessary for public health and safety.
- Limit pressure washing of buildings to situations that require it as part of scheduled building rehabilitation project (e.g., painting).
- Prohibit water waste including untended hoses without shut-off nozzles, obvious leaks and water running to waste such as gutter flooding and sprinklers/irrigation whose spray pattern unnecessarily and significantly hits paved areas

Exemptions from Water Use Restrictions

- Lawn Watering Ban Exemption Newly installed lawns may be exempted from a ban if the procedures listed below are followed. Those wishing to use this exemption would need to contact the District office in advance of the exemption being granted, providing their name, address, phone number, size of lawn and type of watering system. This information would allow the District to quantify the amount of water used under this exemption and to spot check for compliance. The procedures relating to the exemption and the requirements of the exemption would be clearly outlined at the time of the ban. The following procedures are subject to change:
 - Each applicant would be mailed a packet stating the requirements.
 - Once the requirements are met, an authorization packet would be mailed to the customer including a sign to be posted indicating that the District's requirements are being complied with.
 - New lawns must be properly installed, meaning that two inches of organic soil amendment, such as composted yard waste or biosolids, is cultivated into the top six inches of existing soil, at a minimum.
 - New lawns must be watered according to guidelines to be provided in the packet mentioned above.
 - For purposes of this exemption, "new lawn" refers to a lawn newly installed during the current year only. Over seeded or otherwise renovated lawns would not be exempt.
- In the event that the shortage continues to worsen and the Emergency Curtailment Stage is invoked, this exemption would be revoked. It would also be revoked on a case-by-case

basis if the rules stated above are not followed, or in the case of a water system emergency. Monitoring and enforcement are at the discretion of the District. The existence of an exemption to a watering ban would be announced early in the response process, for example when the Advisory Stage is invoked.

- Automatic Irrigation System Exemption Users of automatic irrigation systems may be exempt from certain mandatory watering restrictions if proper procedures are followed but not from a total watering ban. This approach allows an alternate path to achieving savings due to the precision with which such systems can be operated, but is not intended to be a loophole to avoid the need to curtail use. For example, if only 30 minutes of lawn watering is allowed per week, automatic irrigation systems which meet the criteria would be allowed to water based on a certain percentage of evapotranspiration (ET), such as 50%, instead of the time-limit based restriction. [Note: ET is a factor calculated according to climatic data, which is commonly used for lawn watering in commercial applications; ET data would be made available on the District's web page and in alternate formats.] In the event of a total watering ban, these users would also be prohibited from watering (unless other safety-based criteria are met, as stipulated in the Water Shortage Contingency Plan).
- The procedures to be met include:
 - The area must be audited by an Irrigation Auditor as certified by the Irrigation Association (list from the IA to be available on request).
 - Irrigation efficiency of the system must be at least 62.5%, as defined by the Irrigation Association (includes both system distribution uniformity and management practices).
 - A baseline irrigation schedule based on historical ET must be provided to the system's owner/operator.
 - The owner/operator must evaluate actual ET on at least a weekly basis and change the irrigation schedule if warranted by the ET index.
 - The owner/operator must contact the utility to provide the name of the auditor, date of inspection and the efficiency rating, as well as the name, address and phone number of the contact person for the site being watered, prior to using the exemption
 - Time of day restrictions, such as watering prohibited between 6:00 am and 8:00 pm, would have to be met.
 - The system must have a functioning rain-shutoff device.
 - Watering limitations stipulated by the District would need to be followed. The limitations would be stated as a percent of ET, so that, for example, users who meet the above requirements would be able to water based on 50% of ET (the specific percent amount would be decided upon at the time the restriction is announced, depending on the supply outlook). The District's website (www.yvwd.dst.ca.us/conserve.htm) would be regularly updated to provide the information needed for those watering according to this exemption; the information would be available through other means as well.
- Other Exemptions For purposes of dust control, water may be applied to construction areas or other areas needing to comply with air quality requirements. If recycled water is available, consider requiring or promoting that it be used for dust control, if feasible.

- Ball fields and play fields may be watered at the minimum rate necessary for dust control and safety purposes.
- The District will exempt customers with special medical needs such as home dialysis from any emergency surcharge provided individual customers notify the District of such a need

Water Supply Actions

• If not already implemented, activate interties and any other alternative sources of supply.

EMERGENCY CURTAILMENT STAGE

At this stage, the District recognizes that a critical water situation exists. Without additional significant curtailment actions, a shortage of water for public health and safety will be imminent. No prior emergency in the Yucaipa Valley Water District's history fits this description.

This stage is characterized by two basic approaches. First, increasingly stringent water use restrictions are established and enforced. Secondly, significant rate surcharges are used to encourage customer compliance. While a rate surcharge may be implemented in either the Voluntary or Mandatory stages, a surcharge is a key component to the success of this stage and previous surcharge may be increased if appropriate.

<u>Emergency Curtailment Action Plan - Suggested Actions</u> - The suggested actions will be modified accordingly based on regional and statewide activities, actions and press coverage.

- Continue all previous, applicable actions.
- Define the problem to the public as an emergency and institute formal procedures to declare an emergency.
- Inform customers of the rate surcharge and how it will affect them. Provide information on an appeal process.
- Coordinate with police and fire departments requesting their assistance in enforcing prohibition of water waste.
- Inform customers that taste and odor water quality problems may occur with system-wide reduced water consumption.
- Inform customers about possible pressure reductions and problems this may entail.
- Define and communicate exemptions for medical facilities and other public health situations.

<u>Yucaipa Valley Water District Internal Operations for Emergency Curtailment</u> - The suggested actions may be modified accordingly based on the specific situation.

- Continue and enhance "Water Watcher" patrols.
- Continue actions listed in prior stages.
- Curtail fire flow and pipeline testing unless it can be shown to be essential to protect the immediate public health and safety.
- Further enhance water quality monitoring actions

Supply and Demand Management Actions

• Rate surcharges would be implemented to encourage customer compliance with the restrictions, as follows:

- Commercial Customers Commercial, multifamily and industrial users would be asked to reduce water use by a set percentage of their consumption during the same period in the previous year. Emergency rate surcharges would be established to provide an additional incentive to reduce water use. It is the District's intention to establish a multi-tiered structure. This "variable block approach" would allow for different surcharge rates based on the individual customer's consumption during the same period in the previous year. For example, if the District were to target desired reduction of 85% from the previous year's consumption in that period, any consumption between 0 and 85% would be billed at one rate and any consumption over 85% would be billed at another, much higher rate. In this way, the targeted reduction amount and resulting surcharges would be customized around each customer's water use patterns, while still resulting in a steep surcharge for consumption in excess of the target amount for each block.
 - A billing system modification would be needed to allow the District to accomplish this. If this has not been done by the time it may be needed, a simple across-the-board rate surcharge would be applied.
- Residential Customers A multi-tiered, increasingly steep rate structure would be implemented for residential customers (includes single-family dwellings and duplexes). While there are differences in household size, there is more similarity in residential domestic water use than there is in commercial water use.
 - All lawn and turf irrigation would be prohibited
 - Make recycled water available for street cleaning, construction projects, landscape irrigation, dust control, etc.
 - Require that all firefighting agencies discontinue the use of water in training exercises until emergency is over.
 - Rescind all construction meter or fire hydrant permits.

Short-Term Emergency Curtailment Plan

Although many of the demand reduction measures employed would be similar to those used during a progressive, weather-related shortage, short-term emergencies are unique because of a lack of preparation time and the urgency of immediate, large-scale demand reductions. Each emergency scenario is different, but most of them require major curtailment actions by customers. Also, unlike a drought, some emergencies would be localized, requiring demand reduction for only a limited geographic area.

Strategies for dealing with emergencies have been developed based on lessons learned from previous water utility events, other utility experiences, and a sorting of measures based on specific criteria.

Throughout water shortage events, consistent conservation messages and information on appropriate demand reduction measures should be delivered to water users through the media and by direct contact. Although exact demand reduction goals may not always be met by water users, the water demands during short-term emergencies must be curtailed enough to be beneficial and avoid more serious water shortages.

Yucaipa Valley Water District Adopted on June 15, 2011

There are several criteria by which to decide which demand management measures are appropriate to initially reduce demand during an emergency:

- **Timing:** can the measure(s) or action(s) deliver the necessary savings in the necessary timeframe, i.e., are immediate savings needed or can the system support a gradual reduction in demand;
- Magnitude of savings: will the measure produce enough savings to make a meaningful difference i.e., reduce demand to the level the impaired water system can handle;
- Season: does the action make any impact at the time of year that the emergency occurs, i.e., banning lawn watering will have little impact in the winter months;
- **Costs:** How severe are the cost implications of the measure to the customer, including local business and industry.

Supply and Demand Management during Emergencies

No single strategy can be created which will meet the needs of the District for all emergency scenarios. The criteria listed above create a framework for decision-making. Emergencies initially require quick and immediate response. Once an assessment is made as to how long it will take to restore the system, the immediate response strategy may change if it appears that the repair process will be lengthy.

The strategy for most emergencies can be narrowed to measures having the most immediate impact on water supply and consumption. All needed and available back up supplies would be activated during an emergency, including the use of interties and standby water production wells.

Operational Updates

Yucaipa Valley Water District Board Workshop - March 10, 2015 - Page 34 of 149

Yucaipa Valley Water District Workshop Memorandum 15-034

Date: March 10, 2015

Subject: Installation of Air Conditioning Equipment at Lift Station No. 1

The District staff has been reviewing options for a cooling system needed for the variable frequency drive units and other electronic equipment at Lift Station No. 1. There have been times when the temperature within the facility exceeds 110° F. The high temperatures will shorten the life of the electronic equipment and may result in the failure of the lift station.

The chart below shows the daily temperature trends outside of the facility (blue) and inside the building at the variable frequency drive unit (red). A properly installed cooling unit

Indoor electrical equipment at Lift Station No. 1.

Lift Station No. 1

At the workshop meeting on December 9, 2014, the District staff discussed the need for installing a cooling system at Lift Station No. 1 to protect the electrical equipment located at the facility [Workshop Memorandum No. 14-197]. At this meeting, the District staff was directed to pursue a design-construct-install contract with Burgeson's Heating and Air Conditioning to facilitate the installation of a properly sized cooling system with the structural limitations of the facility.

Once the cooling system was sized and the layout and configuration were determined, the District staff solicited costs for the electrical wiring needed to install the new 15 ton air conditioning system.

Based on the prices of the cooling equipment, the District staff will be recommending to issue a purchase order to Burgeson's Heating & Air Conditioning for a sum not to exceed \$39,285 and to Miller Electric for a sum not to exceed \$2,226 for a total project cost of \$41,511.

Yucaipa Valley Water District Workshop Memorandum 15-035

Date: March 10, 2015

Subject: Demolition of the Building, Basement and Foundation at 35192 Cedar Avenue - Yucaipa (Assessor Parcel Number 0303-232-17)

At the board workshop held on May 27, 2014, the District staff discussed the need to demolish the existing building at 35192 Cedar Avenue. With concurrence from the Board of Directors, the District staff proceeded to move the documents stored and this facility, remove the windows, and physically disconnect all utilities (water, sewer, electrical, phone and gas services). With the building prepared for demolition, the District staff solicited proposals for the demolition work.

The District staff received the following three proposals to demolish the structure:

- J.B. Paving and Engineering \$20,550;
- Larry Jacinto Construction \$21,352; and
- Jeremy Harris Construction \$23,000.

At the board workshop on February 24, 2015, Mark Westwood provided information during the public comment portion of the meeting stating his interest in establishing a local radio station. Based on his initial view of the exterior of the structure, he believes the existing Cedar Avenue building would be ideal for a local radio station. Following the meeting, the District staff provided Mr. Westwood with an opportunity to inspect the interior of the building.

While the District staff previously received direction to demolish the building, the Board of Directors may want to consider delaying the demolition to allow Mr. Westwood sufficient time to fully evaluate the costs associated with utilizing the structure for a local radio station.

If the Board of Directors would like to consider leasing the building, Mr. Westwood may need to secure a conditional use permit from the City of Yucaipa to allow a commercial use in the residential area. The terms of a conditional use permit may require improvements to the building that typically would include specific requirements related to the following items:

- Installation of doors and windows;
- Repair leaking roof;
- Landscaping to commercial standards;
- Parking lot improvements to commercial standards;
- Compliance with the Americans with Disabilities Act may be required for commercial use;
- Installation of antennae equipment and a new base/foundation;
- Heating / air conditioner unit installation;
- Water heater installation;
- Plumbing may need replaced;
- Flooring / carpet; and
- Electrical panel and wiring evaluated and upgraded to building code standards.

If the Board of Directors decide to delay the demolition of the building, it would be helpful to provide direction to District staff for (1) allocating the expenses associated with rehabilitating the building and securing occupancy of the facility; and (2) the potential lease terms. By assigning the rehabilitation costs to either the District or to Mr. Westwood and identifying a potential lease rate, Mr. Westwood will have more information to fully evaluate the feasibility of using the existing structure for his proposed radio station.

STANDARD Demolition Specifications Old Cedar Street Office 35192 Cedar Street Yucaipa CA 92399

OWNER OF PROPERTY: Yucaipa Valley Water District (YVWD)

PART 1- GENERAL

1.1 SUMMARY

- A. This Section includes the following:
 - 1. Demolition and removal of building, basements, and foundations.
 - 2. Demolition and removal of site improvements, including but not limited to retaining walls, paving and foundation landscaping. Existing trees 4" in diameter, located outside of 5 feet from the structure shall remain and be protected during demolition.
- B. Related Sections: The following contain requirements that relate to this Section.
 - 1. Division I Section "Soil Erosion-Sedimentation Control".
 - 2. Division 2 Section "Excavating, Filling and Grading" for soil materials, excavating, backfilling, and site grading.

1.2 DEFINITIONS

- A. Remove: Remove and legally dispose of items except those indicated to be reinstalled, salvaged, or to remain (YVWD's) property.
- **B.** Existing to Remain: Protect items indicated to remain against damage during demolition.

1.3 MATERIALS OWNERSHIP

A. Except for items or materials indicated to be reused, salvaged, or otherwise indicated to remain the (YVWD's) property, demolished materials shall become the Contractor's property and shall be removed from the site with further disposition at the Contractor's option.

1.4 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division I Specifications sections, for information only, unless otherwise indicated.
- B. Proposed dust control measures.
- C. Proposed noise control measures.
- D. Schedule of demolition activities indicating the following:
 - 1. Detailed sequence of demolition and removal work, with starting and ending dates for each activity.
- E. Inventory of items to be removed and salvaged.
- F. Landfill records for record purposes indicating receipt and acceptance of hazardous wastes by a landfill facility licensed to accept hazardous wastes.

1.5 QUALITY ASSURANCE

- A. Demolition Firm Requirements: Contractor shall have successfully completed demolition work similar to that indicated for this project.
- B. Regulatory Requirements: Comply with governing EPA, state and local notification regulations before starting demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.

1.6 PROJECT CONDITIONS

- A. Contractor is responsible to comply with any/all required demolition permits required by local authorities and ordinances. No permit required
- B. Buildings to be demolished will be vacated and their use discontinued before start of work.
- C. Authority assumes no responsibility for actual condition of parking lot to be demolished. 1. Conditions existing at time of inspection for bidding purpose will be maintained by (YVWD) as far as practical.
- D. Storage or sale of removed items or materials on-site will not be permitted.
- E. Landfill Disposal
 - 1. Contractor shall supply Authority with a copy of landfill and disposal receipts.

PART 2- EXECUTION

2.1 EXAMINATION

- A. Survey existing conditions and correlate with requirements indicated to determine extent of demolition required.
- B. Survey the condition of the buildings to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of the structure or adjacent structures during demolition.
- C. Perform surveys as the work progresses to detect hazards resulting from demolition activities.

2.2 PREPARATION

- A. Drain, purge, or otherwise remove, collect, and dispose of chemicals, gases, explosives, acids, flammables, or other dangerous materials before proceeding with demolition operations.
- B. Employ a certified, licensed exterminator to treat building and to control rodents and vermin before and during demolition operations.
- C. Conduct demolition operations and remove debris to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.
 - 1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from the Authority and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.

- D. Conduct demolition operations to prevent injury to people and damage to adjacent buildings and facilities to remain. Ensure safe passage of people around demolition area.
 - 1. Erect temporary protection such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction.
 - 2. Protect existing site improvements, appurtenances, and landscaping to remain.
 - 3. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.

2.3 EXPLOSIVES

A. Use of explosives will not be permitted.

2.4 POLLUTION CONTROLS

- A. Use water mist, temporary enclosures, and other suitable methods to limit the spread of dust and dirt. Comply with governing environmental protection regulations.
 - 1. Do not create hazardous or objectionable conditions, such as ice, flooding, and pollution, when using water.
- B. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- C. Clean adjacent buildings and improvements of dust, dirt and debris caused by demolition operations. Return adjacent areas to condition existing before start of demolition.
- D. Contractor shall limit hours of operation to Monday through Friday during the hours of 7:00 a.m. to 6:00 p.m. Special hours of operation outside the normal hours must be approved by the (YVWD). Contractor shall limit noise pollution at all times to prevent objectionable conditions.

2.5 DEMOLITION

- A. Building Demolition: Demolish buildings, structures, facilities, and other debris including brush and trees or logs, and completely remove from the site. Use methods required to complete work within limitations of governing regulations and as follows:
 - 1. Locate demolition equipment throughout the building and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
 - 2. Dispose of demolished items and materials promptly. On-site storage or sale of removed items is prohibited.
 - 3. Small buildings may be removed intact when permitted by the (YVWD's) representative and approved by authorities having jurisdiction.
 - 4. Break up and remove concrete slabs on grade, unless otherwise shown to remain.
 - 5. Remove air-conditioning equipment without releasing refrigerants.
 - 6. Remove structural framing members to ground to avoid free fall and to prevent ground impact and dust generation.
- B. Below-Grade Construction: Demolish foundation walls and other below-grade construction, as follows:
 - 1. Basement Excavation
 - a. Below grade structures foundation/basement floor shall be totally removed.
- C. Filing Below-Grade areas: Completely fill below-grade areas and voids resulting from

demolition of buildings and pavements with soil materials COMPACTION REPORTS REQUIRED: BOTTOM, CENTER and TOP OF EXCAVATION 90%

- D. Damages: Promptly repair damages to adjacent facilities caused by demolition operations.
- **E. Special Conditions**
 - 1. The Contractor shall preserve all surrounding buildings and property. Contractor should note the proximity of surrounding buildings. Any damage to surrounding buildings or property will be repaired by the Contractor at his expense.

2.6 DISPOSAL OF DEMOLISHED MATERIALS

- A. General: Promptly dispose of demolished materials. Do not allow demolished materials to accumulate on-site.
- B. Burning: Do not burn demolished materials.
- C. Disposal: Transport demolished materials of (YVWD's) property and legally dispose of them.
- D. Contractor shall supply (YVWD) with a copy of all landfill and disposal receipts. City of Yucaipa recycle requirements apply.

2.7 MEASUREMENT & PAYMENT

- A. The work of Building Demolition shall not be paid for separately but shall be included in the lump sum project cost.
- **B.** Prevailing wage requirements apply to project.

Proposal

Date: 2-5-15

To: YVWD

Attn: John Hull

Re: Demo of Cedar Ave office

1) Demo existing block building including basement and foundation.

- 2) Demo existing surrounding asphalt.
- 3) Backfill and compact void left from basement.
- 4) Includes compaction report when project is completed.
- 5) Includes traffic control.
- 6) Project is small, should be completed in 4 days.
- 7) All building and site materials, more than likely will end up in a land fill.

Total \$20,550.00

Yucaipa Valley Water District Board Workshop - March 10, 2015 - Page 54 of 149

Yucaipa Valley Water District Workshop Memorandum 15-036

Date: March 10, 2015

Subject: Discussion Regarding the Installation of a Water Meter for the Construction of a Second Residential Dwelling at 10556 Bryant Street - Yucaipa

The District staff is currently working with Chris Stark for the construction of a second unit at property located at 10556 Bryant Street, Yuciapa. This property was recently developed with a new RV Storage Facility and one residential dwelling.

Background

Prior to the construction of the RV Storage Facility, the subject property located at 10556 Bryant Street, had two water meters to provide water service to two residential dwellings. In 1988, a 1" water meter was installed to serve the westerly dwelling. This meter was turned off in 2004 and subsequently returned to service in 2012.

A second water meter was installed closer to Byrant Street in 1991 and continues to provide service to the existing dwelling on the easterly portion of the property.

The aerial photograph below from 2012 shows the subject property with the two dwellings that existed at the time and the location of the Yucaipa Valley Water District Well No. 37.

To provide for the RV Storage Facility, the developer decided to demolish the westerly home.

In 2013, the District staff drafted a Development Agreement with the developer (attached). However, the developer opted to proceed with the development and not execute the development agreement. The District staff drafted the development agreement based on our understanding of the proposed project and representations made in correspondence dated June 22, 2012 The correspondence (attached). received by the District stated that the proposed RV Storage Facility would be screened from the neighbors view by a "living fence with lush green vines and a row of Itailian cypress trees to create a wall of green". Since there is no recycled water in the area and the RV Storage

Facility is immediate adjacent to existing YVWD drinking water pipelines, the District staff prepared Section 4 of the draft development Agreement to utilize the westerly water meter for use

Based on recent billing data, the irrigation meter for the RV Storage Facility uses an average of 37,000 gallons of water per month. The existing dwelling located near Bryant Street uses about 5,000 gallons per month. Neither of these volumes of drinking water are unreasonable for the use.

The developer is now proposing to construct a second dwelling on the property. The proposed dwelling will require additional drinking water system capacity and will be required to pay the appropriate water facility capacity charges and sewer facility capacity charges for the new residential dwelling unit.

The District received correspondence dated March 2, 2015 stating that the additional dwelling unit should not be required to pay an addiitonal charge for drinking water system capacity and that pre-exisitng water capacity should be assigned to the new unit. A copy of the letter is attached for your review.

YVWD Board Members

Re: 10556, 10560 Bryant St, Yucaipa, Ca

This letter is in regards to me demolishing an existing residence approximately 1 year ago with address of 10556 1/2. This house was serviced by an existing 1" water meter which also supplied water to a walnut grove back in the day. I demoed the house so I could put RV parking spaces in the back with full intention to rebuild the same house up in the front. I supplied the city as well as the YVWD with plans reflecting this. I kept the water meter in its existing place and I am currently using it to irrigate drought tolerant low water use trees and plants around the perimeter, there is NO domestic water from this meter. I would like to ask to relocate this service meter to the south east portion of this property where there is currently a service lateral in which I paid to put in. I would like to request a non potable recycle meter be put back in its place to service my plants.

I do not feel that I should have to incur an extra EDU credit for this meter seeing how this meter serviced a house before, as well as a walnut grove. This meter & sewer lateral EDU should go with the house. The RV parking in rear is no different than a backyard having plants and trees (other than it is less water usage on average than the typical house having grass and landscape in the rear yard or a pool). The RV Storage does have a dump station which is only accessible to customers of the parking lot. On average there are 3 customers per week in which use it. A typical RV holds 60-85 gallons of black water sewage in its holding tank. That is an average of 255 gallons per week. A typical home produces between 450- 600 gallons of sewer waste each day that is approximately 3,150 gallons per week. I also do not believe that a complete EDU credit should be charged for this dump station. There are hundreds of houses in this city which have a dump station at their own personal homes.

To recap, I would like to request a non potable water meter or recycled water meter to be switched out with the current 1" domestic water meter that exists currently. The 1" domestic water meter will be relocated up to the front where there is a 1" service lateral so that I can connect the newly rebuilt house and fire sprinkler bull horn.

I will be happy to answer any other questions you may have.

Many Thanks,

Chris Stark

JUN 2 2 2012

Dear Neighbors,

YUCAIPA VALLEY

As per the June 6th planning commission meeting regarding the propATER SUSTRICT area: The purpose of this letter is to help clear up any misconceptions and to also let residents know about the alternative proposed development. I did not realize that there was so much opposition regarding this storage project. I do realize that any new development proposed in anyone's backyard will be a hard pill to swallow. However, I truly do believe that what I propose would the best option for this neighborhood. Let me explain.

When first looking to develop this land, there were City Council meetings regarding some controversy with RV/ Trailers being stored in neighborhood front yards and in the streets. It then became clear that this property sitting 27 feet below Bryant Street , nestled between backyards of single family homes and mobile homes was the perfect space for a quiet area for RVs and trailers to be stored. I believe this would not impact the neighborhood due to the fact that most RV/ Trailers get used 3-5 times per year. The storage facility would be monitored with security cameras and an onsite care taker. There will be hours of operation that would not allow access into the storage after 7:00pm. There will be a remote gate monitored via the internet and all business transactions will be done via the internet. This facility will entail a living fence with lush green vines and a row of Italian Cypress trees to create a wall of green. The front of the property will have the existing house along with a rebuilt house next door. From Bryant Street the views will be two houses with a green belt of trees and shrubs to visually hide and maintain a clean rural north bench style living. This view would actually be much more visibly appealing than the current view of an old house and dirt. This use would not change zoning or create a commercial use, it is simply an approved use in a residential area.

On the flip side, the property is zoned RS-72C which means a minimum lot size of 7200 sf. I have also developed a plan that would entail putting a public street in, and improving the land for 9 houses. With this business plan, there are profits to be made as well. However, as we all know, the economy is not the best. As a developer, the cost of building a stick built house is at roughly \$100per square foot, plus land, city fees and water fees. It is not profitable to build comparable stick built houses and sell them for a profit. My research has shown that many housing development companies are switching to smaller, more affordable houses at about 1100 square feet. This plan would have to be a modular house, 3 bedroom, 2 bath at a much more affordable price. People cannot afford a 2000 square foot house at \$400,000.00. The impact of 9 houses includes but is not limited to:

9 families (4-6+ people)

9+ Dogs

2-4 Cars per house

6-10 trips per day in vehicle per house Hours of Operation: Whenever they want Lights: Whenever they want Security: What security??? A lot of unknowns with 9 unknown families

When I looked at this project, I asked myself what I would want in my back yard and remembered that my sister lived behind the storage yard at the bottom of Yucaipa Blvd. for 7 years. She never heard a peep and said it was like having a vacant lot behind her. If 9 houses go in, it is set in stone that you will have neighbors forever.

Unfortunately, the lot will not sit vacant. With this being said, I am open for feedback and would like to have a meeting with you all to discuss any concerns you may have, and explain why I truly feel that a bad decision has been made regarding this project. I want to show you how this project can be better than the alternative and how I could actually IMPROVE the quality of living by cleaning up the streets and keeping your neighborhood free of the daily eyesore of Trailers/RVs. Please email me at northbonchrvstorage@gmail.com with any questions.

I will have a presentation with renderings to show how both projects will impact your neighborhood. The meeting will be held at the Yucaipa Community Center Tuesday July 3, 2012 @ 6:00 pm. Thank you for your time and consideration.

Sincerely,

Christopher Stark

AGREEMENT NO. XX-2013

AGREEMENT TO PROVIDE WATER AND SEWER SERVICE TO THE PRIVATE DEVELOPMENT OF SAN BERNARDINO COUNTY ASSESSOR'S PARCEL NUMBER 0303-421-35

This Agreement is made and effective this _______, 2013, by and between the YUCAIPA VALLEY WATER DISTRICT, a public agency ("DISTRICT") and <u>Oak Ridge</u> <u>Design & Development, Inc.</u> ("DEVELOPER"). Each is sometimes referred to herein as a "Party" and jointly as the "Parties".

PROJECT OVERVIEW

Contact information for the parties is as follows:

DISTRICT: Yucaipa Valley Water District 12770 Second Street Post Office Box 730 Yucaipa, California 92399-0730 Attn: Joseph B. Zoba, General Manager Telephone: (909) 797-5119 Facsimile: (909) 797-6381 **DEVELOPER:** Oak Ridge Design & Development, Inc. 34841 Iris Lane

> Yucaipa, California, Attn: Chris Stark Telephone: (951)634-4590 Email: oakridgedd@gmail.com

This project involves the partial commercial development of 2.75 acres into an RV storage facility located on the west side of Bryant Street, south of Carter Street (APN 0303-421-35). This project is located in the City of Yucaipa, San Bernardino County.

The Yucaipa Valley Water District has been involved in the review process for this project and has established an Assessor's Parcel Map file 0303-421-35.

AGREEMENT

NOW, THEREFORE, in consideration of the mutual promises and covenants contained herein, the DEVELOPER and the DISTRICT agree as follows:

1. During the course of construction, all construction work of the Facilities to be conveyed to, and owned and operated by the DISTRICT ("Facilities"), will be inspected by DISTRICT personnel and/or by DISTRICT's consultants at the sole cost of the DEVELOPER. The DEVELOPER acknowledges that the DISTRICT's inspector(s) shall have the authority to require

Yucaipa Valley Water District

that any and all unacceptable materials, workmanship, construction and/or installation not in conformance with standard practices, qualities and standards in the industry, as reasonably determined by the DISTRICT, shall be replaced, repaired or corrected at DEVELOPER's sole cost and expense.

2. The DEVELOPER hereby agrees that Facilities shall be planned, designed and constructed, at its sole cost and expense, in accordance with all applicable laws, rules, regulations and policies, including the DISTRICT's Design Manual and Construction Guidelines, in effect at the time of construction. The DEVELOPER shall strictly comply with all applicable law, rules and regulations, concerning the provision of services, materials and the payment of wages. The DEVELOPER shall keep fully informed of and obey all laws, rules and regulations, and shall indemnify the DISTRICT against any liability arising from DEVELOPER's violation of any such law, rule or regulation.

3. Prior to proceeding with any construction, the DEVELOPER shall schedule and conduct a preconstruction conference with the DISTRICT's Engineer and/or designees or agents.

4. <u>Ownership</u>; <u>Operation and Maintenance</u>: Once constructed and accepted by the DISTRICT, title to the Facilities (and associated right-of-way) shall be conveyed by the DEVELOPER to the DISTRICT, and the DISTRICT will operate and maintain the Facilities and will provide service to the DEVELOPER's Property in accordance with the DISTRICT's rules and regulations and the provisions of this Agreement.

a. This property will not be required to become a dual plumbed site for the purpose of recycled water use.

b. This single property currently has an EDU credit for water and sewer service for an existing home at 10556 Bryant Street and an EDU credit for water and sewer service for a home that has been torn down at 10556-1/2 Bryant Street.

c. The DEVELOPER has requested that the 1-inch water service for 10556-1/2 Bryant Street be converted to an irrigation service for the RV storage facility. (1)-EDU credit for water service from 10556-1/2 Bryant Street shall be assigned to this service as paid in full. This service will require the installation of a USC approved RP backflow device as close as possible to the water meter location and will be required to be tested and certified each year by the property owner.

d. The DEVELOPER has paid for the DISTRICT crews to install a new 1-inch water service next to the existing 3/4-inch water service for 10556 Bryant Street at the DEVELOPER's expense. All necessary fees for water and sewer service related to the future construction of an additional EDU will be due at the time of building permit.

e. The DEVELOPER has need of a 6-inch fire service tap on the existing public water main within the DISTRICT's real property of Assessor's Parcel Number 0303-421-33. The DISTRICT will complete the 6-inch hot tap at the DEVELOPER's expense and the DEVELOPER will extend the service connection to the adjacent property line to the installation location of the required double detector check backflow device (DDC) for the private fire system pursuant to DISTRICT Standard Drawing W-13. As the DEVELOPER is installing the service line from the valve to the DDC, standard inspection and testing procedures will be required, also at the DEVELOER's expense.

Yucaipa Valley Water District

f. Due to the nature of the commercial development of the DEVELOPER's property as a RV Storage Facility, the DEVELOPER has requested a permanent connection to the public sewer by special permission from the DISTRICT Board of Directors. The DEVELOPER shall provide all necessary information as to the anticipated loading of the wastewater generated by the RV storage facility and the connection design to the DISTRICT prior to approval. The connection installation and location must be approved by the Board and inspected by the DISTRICT Environmental Control Department for compliance with all necessary and related requirements of the DISTRICT at the time of construction prior to the final of acceptance of the facility. The monthly billing rate for this connection will be determined by the DISTRICT upon review of the anticipated loading. (1)-EDU credit for sewer service from 10556-1/2 Bryant Street shall be assigned to this sewer connection as paid in full.

g. The DEVELOPER shall at no time make use of the DISTRICT's driveway access to Assessor's Parcel Number 0303-421-33. The DEVELOPER shall maintain drivable access to the DISTRICT properties at all times and shall not encroach on the DISTRICT property at any time without prior written permission from the DISTRICT. The DEVELOPER shall also construct a new access gate on the same DISTRICT property near the entry point off of Bryant Street to prevent usage of the DISTRICT property by the private commercial project at the DEVELOPER's expense.

5. The DEVELOPER shall be solely responsible for the payment to the DISTRICT of all fees, charges, costs and expenses related to this development. In the event of a change in the DISTRICT's schedule of fees and charges, such change shall automatically be incorporated into this Agreement as though set forth in full.

6. The DEVELOPER and the DISTRICT agree that the DISTRICT, its employees, agents and officials, shall be fully protected and indemnified from any loss, injury, damage, claim, fine, penalty, lawsuit, cost, expense, attorneys' fees, litigation costs, defense costs, court costs or any other costs arising out of or in any way related to the performance by DEVELOPER of this Agreement. Accordingly, the provisions of this indemnity provision are intended by the parties to be interpreted and construed to provide the fullest protection possible under the law to the DISTRICT. DEVELOPER acknowledges that the DISTRICT would not enter into this Agreement in the absence of this commitment from the DEVELOPER to indemnify and protect the DISTRICT as set forth herein.

7. Unless extended by mutual agreement of the parties in writing, this Agreement shall terminate at 5:00 p.m., on the day before the sixth (6th) anniversary date of this Agreement; provided, however, that this Agreement shall automatically terminate, as follows:

a. Upon expiration of the recorded map regardless of the decision to extend the expiration date by the land use authority; or

b. Immediately, upon abandonment by the DEVELOPER of the DEVELOPER's project and/or the work hereunder; or

c. Within 45 days of the date of the issuance of a Notice of Default by the DISTRICT to the DEVELOPER in the event the DEVELOPER fails or refuses to perform, keep or observe any of the terms, conditions or covenants set forth in this Agreement.

Yucaipa Valley Water District

In the event of termination, and in order to counteract any threat to the public's health, safety or welfare, the DISTRICT shall have the right, without liability to the DEVELOPER, to complete, at the DEVELOPER's non-reimbursable expense, all or a portion of the Facilities constructed pursuant to this Agreement.

Notwithstanding the foregoing, the Indemnification clauses contained herein shall survive the termination of this Agreement.

8. This Agreement may be amended in writing signed by both parties.

9. However, this Agreement shall not be assignable except by the written consent of both parties.

10. This Agreement is not intended to create, and nothing herein contained shall be construed to create, an association, a trust, a joint venture, a partnership or other entity of any kind, and either party is intended to be the agent, employee or partner of the other. This Agreement is only for the benefit of the parties to this Agreement, their successors and assigns. No other person or entity shall be entitled to rely on any matter set forth in this Agreement.

11. All disputes related to this Agreement shall first be submitted to non-binding mediation.

IN WITNESS WHEREOF, the parties have executed is Agreement to be effective on the day and year first above written.

Yucaipa Valley Water District Board Workshop - March 10, 2015 - Page 67 of 149

Yucaipa Valley Water District Workshop Memorandum 15-037

Date: March 10, 2015

Subject: 2015 Pipeline Replacement Program - Construction of an 8-Inch Potable Water Pipeline in 8th Street and Washington Drive, Yucaipa

On January 21, 2015, the Board of Directors authorized the District staff to solicit bids for the construction of an 8-inch drinking water pipeline in 8th Street and Washington Drive. The proposed pipeline project will involve the construction of 1,565 linear feet of 8-inch ductile iron pipe in 8th Street from Avenue C to Washington Drive and in Washington Drive from 8th Street to Cypress Street. These pipes will replace an existing 6-inch steel leak-prone pipe.

On March 4, 2015, the District staff opened bids for the project. The preliminary bid results are provided below.

Preliminary Bid Results

The District staff is in the process of reviewing the bid documents. A recommendation will be provided at the board meeting on March 18, 2015.

Financial Considerations:

Funding for this project will be from water depreciation reserves.

Yucaipa Valley Water District Workshop Memorandum 15-038

Date: March 10, 2015

Subject: Status Report on the Construction of a 6.0 Million Gallon Drinking Water Reservoir R-12.4 - Calimesa

At the regular meeting on July 16, 2014, the Board authorized the solicitation of bids for the construction of a 6.0 Million Gallon R-12.4 Reservoir located on Singleton Road in Calimesa [Director Memorandum No. 14-060].

On November 19, 2014, the Board of Directors awarded the construction contract for the reservoir facility to Gateway Pacific Contractors [Director Memorandum No. 14-091].

The purpose of this agenda item is to provide an update on the progress of the reservoir construction project.

Yucaipa Valley Water District Workshop Memorandum 15-039

Date: March 10, 2015

Subject: Compensatory Mitigation Requirements from the California Department of Fish and Wildlife for the Second Street Pipeline Project across Wilson Creek - Yucaipa

At the regular board meeting on September 3, 2014 the Board of Directors authorized the District staff to solicit bids for the construction of a 30" drinking water conveyance pipeline and 12" drinking water pipeline in Second Street, Yucaipa [Director Memorandum No. 14-072].

For the portion of the pipeline that will be constructed in the streambed of Wilson Creek, the District will be required to mitigate the temporary habitat impacts related to the construction activities.

The California Department of Fish and Wildlife will require a mitigation ratio of 2:1 for the impacted area. The draft mitigation agreement and Operational Law letter from the California Department of Fish and Wildlife are attached for your review.

AGREEMENT TO FACILITATE COMPENSATORY MITIGATION EFFORTS

This COMPENSATORY MITIGATION AGREEMENT ("Agreement") is entered into this day of February 2015 ("Execution Date") by and between YUCAIPA VALLEY WATER DISTRICT, a governmental special district ("YVWD") and the INLAND EMPIRE RESOURCE CONSERVATION DISTRICT, a governmental special district ("IERCD").

RECITALS

WHEREAS, YVWD is planning to construct a new pipeline. The pipeline involves the construction of 960 linear feet of 30" diameter conveyance pipeline from Persimmon Avenue to Eucalyptus Avenue. The pipeline will cross Wilson Creek, a tributary to Gateway Wash, in the City of Yucaipa.

WHEREAS, YVWD has received an Operation of Law letter from the California Department of Fish and Wildlife ("CDFW") dated June 26, 2014 ("Operation of Law Letter") attached as Exhibit "A"; and

WHEREAS, the Operation of Law Letter states that YVWD "proposed to offset temporary impacts to Department jurisdiction through the purchase of mitigation credits from an approved, offsite mitigation bank at a ratio of 2:1 (i.e. 0.28 acre of off-site mitigation)."

WHEREAS, YVWD represents to IERCD that CDFW has accepted IERCD as anapproved, offsite mitigation bank; and

WHEREAS, YVWD and IERCD are relying on an email from CDFW staff attached as Exhibit "B"clarifying the extent of the mitigation required to satisfy the mitigation obligation of the Operation of Law Letter; and

WHEREAS, IERCD is a Resource Conservation District formed for the control of runoff, the prevention or control of soil erosion, and the improvement of land capabilities to pursuant to Public Resources Code section 9151 *et seq.;* and

WHEREAS, IERCD may accept grants of money to carry out its purposes and may establish and charge fees for services provided upon request pursuant to Public Resources Code sections 9401 *et seq.*; and

WHEREAS, YVWD and IERCD (collectively, the <u>"Parties"</u>) desire to enter into this Agreement to set forth the terms and conditions pursuant to which YVWD agrees to provide funds and IERCD agrees to restore 0.28 acres at an offsite location.

AGREEMENT

NOW, THEREFORE, in consideration of the above and the mutual covenants, terms and conditions contained herein, and pursuant to the laws of the State of California, YVWD and IERCD hereby agree as follows:

1. <u>Transaction</u>. IERCD hereby agrees to enhance 0.28 acres of real property on an as yet unidentified location for a period of five (5) years. YVWD agrees to pay IERCD the lump sum amount of \$37,820.00 ("Enhancement Funds"). The Enhancement Funds shall be paid by YVWD to IERCD, by check payable to the Inland Empire Resource Conservation District within 30 days from the execution of this Agreement. Upon receipt of the Enhancement Funds, IERCD

will provide YVWD with a receipt for YVWD's payment of the Enhancement Funds. IERCD shall have no obligation under this Agreement until it receives the Enhancement Funds. IERCD agrees to work with CDFW to find a new, suitable location for the 0.28 acres of restoration ("Transaction").

2. <u>Mitigation Responsibility:</u> The Parties explicitly agree that any mitigation for activities of YVWD not covered by this Agreement, including but not limited to any requirements set forth in the Operation of Law Letter that are not specifically agreed to be conducted by IERCD under this Agreement, or any regulatory permit issued to YVWD other than the Operation of Law Letter: or changes in mitigation related to the Project, remain solely and entirely the responsibility of YVWD. YVWD agrees that IERCD shall not be responsible to conduct services except for those outlined in Section 1 above, even if CDFW and/or any other regulatory agency later modify their respective mitigation requirements from what is outlined in the Operation of Law Letter in Exhibit A, the email in Exhibit B, or what is represented to IERCD in the Recitals as stated above.

3. <u>Term</u>. This Agreement is considered to be fulfilled and completed by YVWD upon 1ERCD's receipt of the Payment.

4. <u>Limitations.</u> The Transaction described in Section 1 above is not intended as a sale or transfer to YVWD of a security, license, lease, easement, or possessory or non-possessory interest in real property, nor the granting of any interest of the forgoing.

5. <u>No Obligation by YVWD.</u> YVWD shall have no obligation whatsoever by reason of the Transaction to support, pay for, monitor, report on, sustain, or otherwise be obligated or liable for the success or continued expense or maintenance of the 0.28 acres. IERCD agrees to restore, monitor and make reports to the CDFW on the status of the 0.28 acres no less than annually for nor more than five (5) years in a form as determined by IERCD in consultation with CDFW.

6. <u>Assignment.</u> The Agreement and the Transaction shall be non-transferable and non-assignable.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the date first above written.

Mr. Brent Anton Yucaipa Valley Water District 12770 Second Street Yucaipa, CA 92399 YUCAIPA VALLEY WATER DISTRICT

4.30%

Subject: Notification of Streambed Alteration No. 1600-2014-0070-R6 YVWD 30-inch potable water pipeline over Wilson Creek

Dear Mr. Anton:

The California Department of Fish and Wildlife (Department) had until June 25, 2014 to submit a draft Streambed Alteration Agreement (Agreement) to you or inform you that an Agreement is not required. The Department did not meet that date. As a result, by law, you may now complete the project described in your notification without an Agreement.

Please note that pursuant to Fish and Game Code section 1602(a)(4)(D), if you proceed with this project, it must be the same as described and conducted in the same manner as specified in the notification and any modifications to that notification received by the Department in writing prior to June 25, 2014. This includes completing the project within the proposed term and seasonal work period and implementing all avoidance and mitigation measures to protect fish and wildlife resources specified in the notification. If the term proposed in your notification has expired, you will need to re-notify the Department before you may begin your project. Beginning or completing a project that differs in any way from the one described in the notification may constitute a violation of Fish and Game Code section 1602.

You have proposed to install a 30-inch potable water pipeline across Wilson Creek, a tributary to Gateway Wash, in the City of Yucalpa, County of San Bernardino, State of California: Latitude 34 N 02' 36.98"; Longitude 117 W 02' 35.36." The pipeline will be constructed across Wilson Creek within the disturbed City right-of-way adjacent Second Street. Pipeline installation will occur using trenching. The project will temporarily impact 0.14 across of sparsely vegetated, CDFW-jurisdictional streambed. You have proposed the following avoidance and minimization measures: implement Best Management Practices (BMPs) to prevent the release of sediments into Wilson Creek (*i.e.* installation of straw waddles around active construction areas and placing spoils outside of the streambed); have a qualified Biologist, as determined by the Department, conduct a preconstruction survey for sensitive plants and animal species in the impacted area; and avoid nesting bird season (March 15-September 30). You have proposed to offset temporary impacts to Department jurisdiction through the purchase of mitigation credits

Conserving California's Wildlife Since 1870

Brent Anton June 26, 2014 Page 2 of 2

from an approved, offsite mitigation bank at a ratio of 2:1 (*I.e.* 0.28 acre of off-site mitigation).

Also, note that while you are entitled to complete the project without an Agreement, you are still responsible for complying with other applicable local, state, and federal laws. These include, but are not limited to, the state and federal Endangered Species Acts and Fish and Game Code sections 5650 (water pollution) and 5901 (fish passage).

Finally, if you decide to proceed with your project without an Agreement, you must have a copy of this letter <u>and</u> your notification with all attachments available at all times at the work site. If you have any questions regarding this matter, please contact Nick Buckmaster at 760-872-1110 or Nick.Buckmaster@wildlife.ca.gov.

Sincerely,

Heidi Sickler

Yucaipa Valley Water District Board Workshop - March 10, 2015 - Page 80 of 149

From: Buckmaster, Nick@Wildlife [mailto:Nick.Buckmaster@wildlife.ca.gov] Sent: Monday, February 02, 2015 4:39 PM To: Jennifer Ares Subject: RE: 1600-2014-0070-R6

Hi Jennifer,

This is correct: YVWD's migratory obligations consist of 0.28 acres of offsite mitigation for five years.

Nick Buckmaster Environmental Scientist California Dept. of Fish and Wildlife Bishop Field Office 407 W. Line St. Bishop, CA 93514 (760) 872-1110 Nick.Buckmaster@wildlife.ca.gov

From: Jennifer Ares [mailto:jares@yvwd.dst.ca.us] Sent: Monday, February 02, 2015 9:55 AM To: Buckmaster, Nick@Wildlife Subject: FW: 1600-2014-0070-R6

Hi Nick,

After discussing the mitigation further with IERCD, they recommended the following change in regards to the email I sent on January 20, 2015. The mitigation is enhancement not restoration.

Just to reconfirm, based on the op/law issued in cooperation with the Wilson Creek project, as well as our recent conversation, I'm writing to confirm your understanding of YVWD's associated mitigation obligation to consist of .28 acre of temporary offsite mitigation. Please respond if this is not your understanding of the situation, otherwise within 30 days, I will proceed with the parameters stated above.

Thank you,

Jennifer Ares Water Resource Manager p-909.790.3301 www.yvwd.dst.ca.us

icaipa Valley Water District Workshop Memorandum 15-040

Date: March 10, 2015

Subject: Authorization to Pre-Purchase 30-Inch Cement Mortar Lined Welded Steel Pipe for the Second Street Pipeline Project

At the regular Board meeting on September, 3, 2014, the Board authorized staff to solicit bids for the construction of a 30-inch potable water conveyance pipeline in 2nd Street, between Persimmon Avenue and Eucalyptus Avenue (approximately 1000 linear feet) [Director Memorandum 14-072]. Approximately 180 linear feet of the project is located within the current and future flow line of the Wilson Creek Channel (the City is contemplating rerouting the flow line of Wilson Creek as part of a larger Flood Control Project). Cement mortar lined welded steel pipe is preferred in this location to help protect the pipe in the event of future scouring of the channel. Welded steel pipe generally requires a longer lead time for procurement; therefore staff is requesting authorization to pre-purchase 180 linear feet of cement mortar lined welded steel pipe for this element of the project.

The pre-purchase of the 180 linear feet of cement mortar lined pipe from West Coast Pipe is at a cost of \$38,843.28 (see attached quotation), which includes delivery to the job site for the future contractor at the appropriate time. This will eliminate any future material delivery delays.

Administrative Items

Workshop Memorandum 15-041

Date: March 10, 2015

Subject: Unaudited Financial Report for the Period Ending on February 28, 2015

The District staff has prepared the attached Unaudited Financial Report for the period ending on January 31, 2015. A graphical summary of the financial information is provided below and detailed information follows as part of the monthly unaudited financial report.

Fiscal Year 2015 YTD Revenues & Budget Targets

Water Division Monthly Expense Summary - FY 2015

Sewer Division Monthly Expense Summary - FY 2015

Director Memorandum 15-xxx

Date:	March 18, 2015
Prepared By:	Vicky Elisalda, Controller Peggy Little, Administrative Supervisor
Subject:	Unaudited Financial Report for the Period Ending on February 28, 2015
Recommendation	n: That the Board receives and files the unaudited financial report as presented.

The following unaudited financial report has been prepared by the Administrative Department for your review. The report has been divided into six sections to clearly disseminate information pertaining to the financial status of the District. Please remember that the following financial information has not been audited.

Cash Fund Balance Report

[Detailed information can be found on page 7 to 8 of 30]

The Cash Fund Balance Report provides a summary of how the total amount of funds maintained by financial institutions is distributed throughout the enterprise and non-enterprise funds of the District. A summary of the report is as follows:

	Operating	Restricted	Total
Fund Source	Funds	Funds	Funds
Water Division	\$8,347,797.09	(\$937,269.44)	\$7,410,527.65
Sewer Division	\$12,664,068.65	(\$6,753,980.61)	\$5,910,088.04
Recycled Water Division	<u>\$3,043,820.73</u>	<u>\$507,020.32</u>	<u>\$3,550,841.05</u>
Total	\$24,055,686.47	(\$7,184,229.73)	\$16,871,456.74

Most of the funds reflected in the Cash Fund Balance Report are designated for specific purposes and are therefore restricted, either by law or by District policy.

Check Register

[Detailed information can be found on pages 9 to 12 of 30]

The check register lists each check processed during the month of February 2015. The District processed 197 checks during the month of February for a total sum of \$1,922,679.01. All checks are reviewed by District staff for accuracy and completeness, and usually signed by the General Manager and one Director, but may be signed by two Directors.

The Controller will make any check, invoice or supporting documentation available for review to any board member upon request.

Financial Account Information

[Detailed information can be found on pages 13 to 16 of 30]

The District currently deposits all revenue received into the Deposit Checking account. The General Checking account is used as a sole processing account for all District checks and electronic payroll. The Investment Checking account is used for the purchase and redemption of US treasury notes and bills and for the transfer of LAIF funds. The US treasury notes and bills are booked at cost.

The LAIF investment account is a pooled money account administered by the State of California. Additional information on the LAIF account is provided below in the investment summary report.

Investment Summary

[Detailed information can be found on pages 17 to 18 of 30]

The investment summary report illustrates the District's investments in US treasury notes and bills in addition to the investments held by the Local Agency Investment Fund or LAIF. The yields for the treasury notes and bills are provided for each individual transaction. The historical annual yield for funds invested with LAIF is also provided.

Separate pooled money investment reports prepared by the State of California are maintained by the District and available for review.

Monthly Revenue Allocation

[Detailed information can be found on pages 19 to 20 of 30]

During the month of February 2015 the District received a sum total of \$1,698,809.13 in revenues from the following categories:

- A total of \$1,502,874.42 was received from 14,330 customers for utility bill payments. This is the total amount of utility bill payments received from water, sewer and recycled services.
- A total of \$3,136.75 was received for construction meter deposits, customer deposits and internet fee payments.
- A total of \$167,284.96 was received from miscellaneous water related activities (other than utility bill charges).
- A total of \$25,513.00 was received from miscellaneous sewer related activities (other than utility bill charges).
- A total of \$0.00 was received from miscellaneous recycled related activities (other than utility bill charges).

Fiscal Year 2015 Budget Status

[Detailed information can be found on pages 21 to 30 of 30]

The revenue and expense budget status for the 2015 Fiscal Year is provided for your review.

Division	Budget Amount	Current Month	Year-To-Date	Percentage
Water	13,072,750	598,758	7,560,556	57.83%

Investment Policy Disclosure

The District is currently compliant with the portfolio of its Investment Policy and State Law.

The District is using Sandy Gage with Merrill Lynch Wealth Management (Bank of America Corporation) for Treasury investments. The District expects to meet its expenditure requirements for the next six months.

Questions or Comments

If you have any questions about a particular budget account, please do not hesitate to contact the Controller directly. If you need additional information, the members of the Administrative Department would be happy to provide you with any detailed information you may desire.

FY 2015 - Recycled Expenses

ucaipa Valley Water District Workshop Memorandum 15-042

Date: March 10, 2015

Subject: Overview of Medical Insurance Premiums for 2015-16

The Yucaipa Valley Water District has received proposals for medical premiums for next year. Overall, the medical premiums have increased by 50%, which will result in an additional \$250,000 annual expense for the District and employees.

The following table illustrates the proposed medical insurance premiums and the District's contribution amount per bargaining group. The increases associated with this benefit will be reflected in the Fiscal Year 2015-16 Operating Budget.

General Employees Monthly Benefit: \$890 General Employees "Family Coverage" Plan Monthly Benefit: \$1,699.00 (up to the Management & Supervisory Groups Monthly Benefit: \$1,294.68	ne family cov∉	erage premium	(

ucaipa Valley Water District Workshop Memorandum 15-043

Date: March 10, 2015

Subject: Authorization to Purchase Replacement Service Trucks for the Public Works Department

Each year the District staff reviews the operating condition, cost and maintenance of fleet vehicles and equipment to evaluate the overall maintenance and replacement needs. This year the District staff has identified the need to replace two service trucks, a 1988 Chevy C-70 2-ton and a 1990 Ford 2-ton.

1988 Chevy C-70

1990 Ford

During the evaluation of vehicles, the Public Works Department staff compared different brands and models equipped with a 12-foot Scelzi Contractor Bed. Two dealers responded to the bid request with the following results:

Dealer	1.25 ton Diesel Service Truck - 4 x 4	Price
Chevrolet	Not offered	
Redlands Jeep	Closed Fleet Department	
Moss Bro. Dodge	No response	
Hunter Dodge	No response	
Browning Dodge	No response	
Rancho Ford	No response	
Redlands Ford	No response	
Sunrise Ford	2015 Ford F-550	\$104,697.84
Citrus Motors	2015 Ford F-550	\$105,814.48

Water Division - Public Works Vehicle Replacement Recommendations

The Public Works Department uses service trucks for routine maintenance of the water, recycled water and sewer facilities. The two current service trucks, a 1988 Chevy C-70 2-ton and a 1990 Ford 2-ton are not 4-wheel drive and therefore make accessibility to many job sites difficult. Due to their age, both vehicles are becoming unreliable and consistently need to be repaired. Parts are difficult to obtain and many times need to be modified.

NOTICE TO BIDDERS:

NOTICE IS HEREBY GIVEN, that the Undersigned, on behalf of the Yucaipa Valley Water District, will accept proposals until 4:00 p.m., March 3, 2015, for the following government agency purchase:

Two (2) NEW & UNUSED Ford 550 or Dodge 5500 4WD white Diesel equipped with a Scelzi Enterprises Inc. Model CTFB 8/12, Contractor Flat Bed. (attachment A)

Final proposal cost must indicate total cost of truck at time of delivery equipped with a Scelzi Enterprise Inc. Model CTFB 8/12, Contractor Flat Bed described in attachment A.

If you have any questions please contact John Hull, Public Works Manager, Yucaipa Valley Water District 12770 Second Street, Yucaipa, CA 92399, by calling (909) 322-3932 or email: jhull@yvwd.dst.ca.us

Proposals will be received at Yucaipa Valley Water District, 12770 Second Street, Yucaipa, CA 92399 or by email <u>ihull@yvwd.dst.ca.us</u> until 4:00 p.m., March 3, 2015

In addition to bid sheets, the bidder shall submit executed non-collusion bid certificates signed by the bidder or one of its officers (attachment B).

Yucaipa Valley Water District reserves the right to reject any and all proposals not considered to be in the best interest of Yucaipa Valley Water District, and to waive any technical or formal defect in the proposal which is considered by Yucaipa Valley Water District to be merely irregular, immaterial, or unsubstantial.

Dated: February 20, 2015

John Hull Public Works Manager Yucaipa Valley Water District 12770 Second Street Yucaipa CA. 92399 (909) 322-3932

Yucaipa Valley Water District: DETAILED SPECIFICATIONS FOR NEW (2015 model year) 4WD SERVICE UTILITY VEHICLE

Bidder shall specify make and model of the vehicle he proposes to furnish, and must submit with his proposal the manufacturer's latest published specification sheet of standard equipment, any optional equipment included.

The unit bid shall meet these specifications without modification to the standard production model except for the addition of optional equipment specified.

Bidder shall list on a separate sheet of paper any and all variations from, or exceptions to, these specifications regarding the proposed equipment. If the equipment differs from these specifications, such differences must be explained in detail and the bid will receive careful consideration, if such deviations do not depart from the intent of these specifications and are in the best interests of Yucaipa Valley Water District. The equipment offered in the bid shall be equal to or exceed these specifications,

Date of delivery may be considered when awarding a Contract. Bidder will state delivery date on his proposal form and must be prepared to guarantee delivery on or before that date.

Payment will be made within 30 days of delivery.

Specified OPTIONAL EQUIPMEN If Not Standard:

2015 Model Year Tier 4 Compliant Regular Cab Color; White 4x4 Chassis Electronic 4WD Transfer Diesel Engine Air Conditioning – CFC Free 6 Speed Auto Trans Dual Rear Wheels Power Steering Trailer Tow Mirrors Power Mirrors See attachment: A

4x4 SD Regular Cab 165" WB DRW XL (F5H)

Powertrain

Powerstroke 6.7L V-8 OHV direct diesel injection 32 valve intercooled turbo diesel engine * 200 amp HD alternator * 750 amp (total) 78 amp hours (Ah) (total) battery dual batteries with run down protection * 6-speed electronic SelectShift automatic transmission with overdrive, lock-up, driver selection * Part-time four-wheel drive with electronic transfer case shift, auto locking hubs * Driveline traction control * 4.10 axle ratio * Stainless steel exhaust

Steering and Suspension

Hydraulic power-assist re-circulating ball steering * 4-wheel disc brakes with front and rear vented discs * Firm ride suspension * Mono-beam non-independent front suspension * Front anti-roll bar * Front coil springs * HD front shocks * DANA 110 rigid rear axle * Rear leaf suspension * Rear anti-roll bar * HD rear leaf springs * HD rear shocks * Front and rear 19.5" x 6.00" argent steel wheels * LT225/70SR19.5 BSW AS front and rear tires

Safety

4-wheel anti-lock braking system * Dual airbags, passenger side front-impact cancellable airbag, seat mounted driver and passenger side-impact airbags, curtain 1st row overhead airbag * Front height adjustable seatbelts

Comfort and Convenience

Air conditioning * AM/FM stereo, clock, seek-scan, 2 speakers, fixed antenna * 2 12V DC power outlets * Analog instrumentation display includes tachometer, engine temperature gauge, turbo/supercharger boost gauge, transmission fluid temp gauge, engine hour meter, exterior temp, systems monitor, trip odometer * Warning indicators include oil pressure, engine temperature, battery, lights on, key, low fuel, door ajar, service interval, brake fluid * Steering wheel with tllt and telescopic adjustment * Manual front windows with light tint * Variable intermittent front windshield wipers * Passenger side vanity mirror * Day-night rearview mirror * Interior lights include dome light with fade, front reading lights * Glove box, front cupholder, instrument panel bin, dashboard storage * Upfitter switches

Seating and Interior

Seating capacity of 3 * 40-20-40 split-bench front seat with adjustable head restraints, center armrest with storage * 4-way adjustable driver seat includes lumbar support * 4-way adjustable passenger seat * Vinyl faced front seats with vinyl back material * Full cloth headliner, full vinyl/rubber floor covering, urethane gear shift knob, chrome interior accents

Exterior Features

Side impact beams, front license plate bracket, fully galvanized steel body material * Black fender flares * Black side window moldings, black front windshield molding * Black door handles * Black grille * 2 doors * Trailer harness * Driver and passenger manual black folding manual extendable trailer outside mirrors * Front black bumper with front tow hooks * Aero-composite halogen headlamps * Additional exterior lights include cab clearance lights, underhood light * Clearcoat monotone paint

Prices and content availability as shown, are subject to change and should be treated as estimates only. Actual base vehicle, package and option pricing may vary from this estimate because of special local pricing, availability or pricing adjustments not reflected in the dealer's computer system. See salesperson for the most current information. Reference CT05211259 7/1/2014

Director Comments

FACTS ABOUT THE YUCAIPA VALLEY WATER DISTRICT

Service Area Size:	40 square miles (sphere of influence is 68 square miles)
Elevation Change:	3,140 foot elevation change (from 2,044 to 5,184 feet)
Number of Employee	s: 5 elected board members57 full time employees
Operating Budget:	Water Division - \$13,072,750 Sewer Division - \$11,689,000 Recycled Water Division - \$433,500 Total Annual Budget - \$25,195,250
Number of Services:	12,206 water connections serving 16,843 units 13,492 sewer connections serving 20,312 units 62 recycled water connections
Water System:	 215 miles of drinking water pipelines 27 reservoirs - 34 million gallons of storage capacity 18 pressure zones 12,000 ac-ft annual water demand (3.9 billion gallons) Two water filtration facilities: 1 mgd at Oak Glen Surface Water Filtration Facility 12 mgd at Yucaipa Valley Regional Water Filtration Facility
Sewer System:	 8.0 million gallon treatment capacity - current flow at 4.0 mgd 205 miles of sewer mainlines 5 sewer lift stations 4,500 ac-ft annual recycled water prod. (1.46 billion gallons)
Recycled Water:	22 miles of recycled water pipelines 5 reservoirs - 12 million gallons of storage 1,200 ac-ft annual recycled demand (0.4 billion gallons)
Brine Disposal:	2.2 million gallon desalination facility at sewer treatment plant1.108 million gallons of Inland Empire Brine Line capacity0.295 million gallons of treatment capacity in Orange County

THE MEASUREMENT OF WATER PURITY

- **One part per hundred** is generally represented by the percent (%). This is equivalent to about fifteen minutes out of one day.
- **One part per thousand** denotes one part per 1000 parts. This is equivalent to about one and a half minutes out of one day.
- **One part per million** (**ppm**) denotes one part per 1,000,000 parts. This is equivalent to about 32 seconds out of a year.
- **One part per billion** (**ppb**) denotes one part per 1,000,000,000 parts. This is equivalent to about three seconds out of a century.
- **One part per trillion** (**ppt**) denotes one part per 1,000,000,000,000 parts. This is equivalent to about three seconds out of every hundred thousand years.
- **One part per quadrillion** (**ppq**) denotes one part per 1,000,000,000,000,000 parts. This is equivalent to about two and a half minutes out of the age of the Earth (4.5 billion years).

GLOSSARY OF COMMONLY USED TERMS

Every profession has specialized terms which generally evolve to facilitate communication between individuals. The routine use of these terms tends to exclude those who are unfamiliar with the particular specialized language of the group. Sometimes jargon can create communication cause difficulties where professionals in related fields use different terms for the same phenomena.

Below are commonly used water terms and abbreviations with commonly used definitions. If there is any discrepancy in definitions, the District's Regulations Governing Water Service is the final and binding definition.

Acre Foot of Water - The volume of water (325,850 gallons, or 43,560 cubic feet) that would cover an area of one acre to a depth of 1 foot.

Activated Sludge Process – A secondary biological sewer treatment process where bacteria reproduce at a high rate with the introduction of excess air or oxygen, and consume dissolved nutrients in the wastewater.

Annual Water Quality Report - The document is prepared annually and provides information on water quality, constituents in the water, compliance with drinking water standards and educational material on tap water. It is also referred to as a Consumer Confidence Report (CCR).

Aquifer - The natural underground area with layers of porous, water-bearing materials (sand, gravel) capable of yielding a supply of water; see Groundwater basin.

Backflow - The reversal of water's normal direction of flow. When water passes through a water meter into a home or business it should not reverse flow back into the water mainline.

Best Management Practices (BMPs) - Methods or techniques found to be the most effective and practical means in achieving an objective. Often used in the context of water conservation.

Biochemical Oxygen Demand (BOD) – The amount of oxygen used when organic matter undergoes decomposition by microorganisms. Testing for BOD is done to assess the amount of organic matter in water.

Biosolids – Biosolids are nutrient rich organic and highly treated solid materials produced by the sewer treatment process. This high-quality product can be used as a soil amendment on farm land or further processed as an earth-like product for commercial and home gardens to improve and maintain fertile soil and stimulate plant growth.

Catch Basin – A chamber usually built at the curb line of a street, which conveys surface water for discharge into a storm sewer.

Capital Improvement Program (CIP) – Projects for repair, rehabilitation, and replacement of assets. Also includes treatment improvements, additional capacity, and projects for the support facilities.

Collector Sewer – The first element of a wastewater collection system used to collect and carry wastewater from one or more building sewer laterals to a main sewer.

Coliform Bacteria – A group of bacteria found in the intestines of humans and other animals, but also occasionally found elsewhere and is generally used as an indicator of sewage pollution.

Combined Sewer Overflow – The portion of flow from a combined sewer system, which discharges into a water body from an outfall located upstream of a wastewater treatment plant, usually during wet weather conditions.

Combined Sewer System– Generally older sewer systems designed to convey both sewage and storm water into one pipe to a wastewater treatment plant.

Conjunctive Use - The coordinated management of surface water and groundwater supplies to maximize the yield of the overall water resource. Active conjunctive use uses artificial recharge, where surface water is intentionally percolated or injected into aquifers for later use. Passive conjunctive use is to simply rely on surface water in wet years and use groundwater in dry years.

Consumer Confidence Report (CCR) - see Annual Water Quality Report.

Cross-Connection - The actual or potential connection between a potable water supply and a non-potable source, where it is possible for a contaminant to enter the drinking water supply.

Disinfection By-Products (DBPs) - The category of compounds formed when disinfectants in water systems react with natural organic matter present in the source water supplies. Different disinfectants produce different types or amounts of disinfection byproducts. Disinfection byproducts for which regulations have been established have been identified in drinking water, including trihalomethanes, haloacetic acids, bromate, and chlorite

Drought - a period of below average rainfall causing water supply shortages.

Dry Weather Flow – Flow in a sanitary sewer during periods of dry weather in which the sanitary sewer is under minimum influence of inflow and infiltration.

Fire Flow - The ability to have a sufficient quantity of water available to the distribution system to be delivered through fire hydrants or private fire sprinkler systems.

Gallons per Capita per Day (GPCD) - A measurement of the average number of gallons of water use by the number of people served each day in a water system. The calculation is made by dividing the total gallons of water used each day by the total number of people using the water system.

Groundwater Basin - An underground body of water or aquifer defined by physical boundaries.

Groundwater Recharge - The process of placing water in an aquifer. Can be a naturally occurring process or artificially enhanced.

Hard Water - Water having a high concentration of minerals, typically calcium and magnesium ions.

Hydrologic Cycle - The process of evaporation of water into the air and its return to earth in the form of precipitation (rain or snow). This process also includes transpiration from plants, percolation into the ground, groundwater movement, and runoff into rivers, streams and the ocean; see Water cycle.

Infiltration – Water other than sewage that enters a sewer system and/or building laterals from the ground through defective pipes, pipe joints, connections, or manholes. Infiltration does not include inflow. See *Inflow*.

Inflow - Water other than sewage that enters a sewer system and building sewer from sources such as roof vents, yard drains, area drains, foundation drains, drains from springs and swampy areas, manhole covers, cross connections between storm drains and sanitary sewers, catch basins, cooling towers, storm waters, surface runoff, street wash waters, or drainage. Inflow does not include infiltration. See *Infiltration*.

Inflow / Infiltration (I/I) – The total quantity of water from both inflow and infiltration.

Mains, Distribution - A network of pipelines that delivers water (drinking water or recycled water) from transmission mains to residential and commercial properties, usually pipe diameters of 4" to 16".

Mains, Transmission - A system of pipelines that deliver water (drinking water or recycled water) from a source of supply the distribution mains, usually pipe diameters of greater than 16".

Meter - A device capable of measuring, in either gallons or cubic feet, a quantity of water delivered by the District to a service connection.

Overdraft - The pumping of water from a groundwater basin or aquifer in excess of the supply flowing into the basin. This pumping results in a depletion of the groundwater in the basin which has a net effect of lowering the levels of water in the aquifer.

Peak Flow – The maximum flow that occurs over a specific length of time (e.g., daily, hourly, instantaneously).

Pipeline - Connected piping that carries water, oil or other liquids. See Mains, Distribution and Mains, Transmission.

Point of Responsibility, Metered Service - The connection point at the outlet side of a water meter where a landowner's responsibility for all conditions, maintenance, repairs, use and replacement of water service facilities begins, and the District's responsibility ends.

Potable Water - Water that is used for human consumption and regulated by the California Department of Public Health.

Pressure Reducing Valve - A device used to reduce the pressure in a domestic water system when the water pressure exceeds desirable levels.

Pump Station - A drinking water or recycled water facility where pumps are used to push water up to a higher elevation or different location.

Reservoir - A water storage facility where water is stored to be used at a later time for peak demands or emergencies such as fire suppression. Drinking water and recycled water systems will typically use concrete or steel reservoirs. The State Water Project system considers lakes, such as Shasta Lake and Folsom Lake to be water storage reservoirs.

Runoff - Water that travels downward over the earth's surface due to the force of gravity. It includes water running in streams as well as over land.

Sanitary Sewer System - Sewer collection system designed to carry sewage, consisting of domestic, commercial, and industrial wastewater. This type of system is not designed nor intended to carry water from rainfall, snowmelt, or groundwater sources. See *Combined Sewer System*.

Sanitary Sewer Overflow – Overflow from a sanitary sewer system caused when total wastewater flow exceeds the capacity of the system. See *Combined Sewer Overflow*.

Santa Ana River Interceptor (SARI) Line – A regional brine line designed to convey 30 million gallons per day of non-reclaimable wastewater from the upper Santa Ana River basin to the sewer treatment plant operated by Orange County Sanitation District.

Secondary Treatment – Biological sewer treatment, particularly the activated-sludge process, where bacteria and other microorganisms consume dissolved nutrients in wastewater.

Supervisory Control and Data Acquisition (SCADA) - A computerized system which provides the ability to remotely monitor and control water system facilities such as reservoirs, pumps and other elements of water delivery.

Service Connection - The water piping system connecting a customer's system with a District water main beginning at the outlet side of the point of responsibility, including all plumbing and equipment located on a parcel required for the District's provision of water service to that parcel.

Sludge – Untreated solid material created by the treatment of sewage.

Smart Irrigation Controller - A device that automatically adjusts the time and frequency which water is applied to landscaping based on real-time weather such as rainfall, wind, temperature and humidity.

Special District - A political subdivision of a state established to provide a public services, such as water supply or sanitation, within a specific geographic area.

Surface Water - Water found in lakes, streams, rivers, oceans or reservoirs behind dams.

Total Suspended Solids (TSS) – The amount of solids floating and in suspension in water or sewage.

Transpiration - The process by which water vapor is released into the atmosphere by living plants.

Trickling Filter – A biological secondary treatment process in which bacteria and other microorganisms, growing as slime on the surface of rocks or plastic media, consume nutrients in primary treated sewage as it trickles over them.

Underground Service Alert (USA) - A free service that notifies utilities such as water, telephone, cable and sewer companies of pending excavations within the area (dial 8-1-1 at least 2 working days before you dig).

Urban Runoff - Water from city streets and domestic properties that typically carries pollutants into the storm drains, rivers, lakes, and oceans.

Valve - A device that regulates, directs or controls the flow of water by opening, closing or partially obstructing various passageways.

Wastewater – Any water that enters the sanitary sewer.

Water Banking - The practice of actively storing or exchanging in-lieu surface water supplies in available groundwater basin storage space for later extraction and use by the storing party or for sale or exchange to a third party. Water may be banked as an independent operation or as part of a conjunctive use program.

Water cycle - The continuous movement water from the earth's surface to the atmosphere and back again; see Hydrologic cycle.

Water Pressure - Pressure created by the weight and elevation of water and/or generated by pumps that deliver water to the tap.

Water Service Line - The pipeline that delivers potable water to a residence or business from the District's water system. Typically the water service line is a 1" to $1\frac{1}{2}$ " diameter pipe for residential properties.

Watershed - A region or land area that contributes to the drainage or catchment area above a specific point on a stream or river.

Water Table - The upper surface of the zone of saturation of groundwater in an unconfined aquifer.

Water Transfer - A transaction, in which a holder of a water right or entitlement voluntarily sells/exchanges to a willing buyer the right to use all or a portion of the water under that water right or entitlement.

Water Well - A hole drilled into the ground to tap an underground water aquifer.

Wetlands - Lands which are fully saturated or under water at least part of the year, like seasonal vernal pools or swamps.

Wet Weather Flow – Dry weather flow combined with stormwater introduced into a combined sewer system, and dry weather flow combined with infiltration/inflow into a separate sewer system.

COMMONLY USED ABBREVIATIONS

AQMD	Air Quality Management District
BOD	Biochemical Oxygen Demand
CARB	California Air Resources Board
